Ableism: The Causes and Consequences of Disability Prejudice Mar 29 2020 The first comprehensive volume to integrate social-scientific literature on the origins and manifestations of prejudice against disabled people Ableism, prejudice against disabled people stereotyped as incompetent and dependent, can elicit a range of reactions that include fear, contempt, pity, and inspiration. Current literature—often narrowly focused on a specific aspect of subject or limited in scope to psychoanalytic tradition—fails to examine the many origins and manifestations of ableism. Filling a significant gap in the field, *Ableism: The Causes and Consequences of Disability Prejudice* is the work to synthesize classic and contemporary studies on the evolutionary, ideological, and cognitive-emotional sources of ableism. This comprehensive volume examines new manifestations of ableism, summarizes the state of research on disability prejudice, and explores real-world personal accounts and interventions to illustrate the various forms and impacts of ableism. This important contribution to the field combines evidence from multiple theoretical perspectives, including published and unpublished work from both disabled and nondisabled constituents, on the causes, consequences, and elimination of disability prejudice. Each chapter places findings in the context of contemporary theories—identifying methodological limits and suggesting alternative interpretations. Topics include the evolutionary and existential origins of disability prejudice, cultural and impairment-specific stereotypes, interventions to reduce prejudice, and how to effect social change through collective action and advocacy. Adopting a holistic approach to the study of disability prejudice, this accessibly-written volume: Provides inclusive, up-to-date exploration of the origins and expressions of ableism Addresses how to resist ableist practices, prioritize accessible policies, and create more equitable social relations with pages earmarked for activists and allies Focuses on interpersonal and intergroup analysis from a social-psychological perspective Integrates research from multiple disciplines to illustrate critical cognitive, affective and behavioral mechanisms and manifestation of ableism Suggests future research directions based on topics covered in each chapter *Ableism: The Causes and Consequences of Disability Prejudice* is an important resource for social, community and rehabilitation psychologists, scholars and researchers of disability studies, and students, activists, and academics across political, sociological, and humanistic disciplines.

Advances in Telephone Survey Methodology Apr 22 2022 A complete and comprehensive collaboration providing insight on future approaches to telephone survey methodology Over the past fifteen years, advances in technology have transformed the field of survey methodology, from how interviews are conducted to the management and analysis of compiled data. *Advances in Telephone Survey Methodology* is an all-encompassing and authoritative resource that presents a theoretical, methodological, and statistical treatment of current practices while also establishing a discussion on how state-of-the-art developments in telecommunications have and continue to revolutionize the telephone survey process. Seventy-five prominent international researchers and practitioners from government, academic, and private sectors have collaborated on this pioneering volume to discuss basic survey techniques and introduce the future directions of the telephone survey. Concepts and findings are organized in four parts—sampling and estimation, data collection, operations, and nonresponse—equipping the reader with the needed practical applications to approach issues such as choice of target population, sample design, questionnaire construction, interviewing training, and measurement error. The book also introduces important topics that have been overlooked in previous literature, including: The impact of mobile telephones on telephone surveys and the rising presence of mobile-only households worldwide The design and construction of questionnaires using Computer Assisted Telephone Interviewing (CATI) software The emerging use of wireless communication and Voice over Internet Protocol (VoIP) versus the telephone Methods for measuring and improving interviewer performance and productivity Privacy, confidentiality, and respondent burden as main factors in telephone survey nonresponse Procedures for the adjustment of nonresponse in telephone surveys In-depth reviews of the literature presented along with a full bibliography, assembled from references throughout the world *Advances in Telephone Survey Methodology* is an indispensable reference for survey researchers and practitioners in almost any discipline involving research methods such as sociology, social psychology, survey methodology, and statistics. This book also serves as an excellent text for courses and seminars on survey methods at the undergraduate and graduate levels.

An Inquiry Into Causes and Consequences of Deprivation of Hindu Minorities in Bangladesh Through the Vested Property Apr 10 2021 **Observations on the Causes and Treatment of Ulcerous Diseases of the Throat** Aug 2020 **A History of Communication** Nov 17 2021 A History of Communications advances a theory of media that explains the origins and impact of different forms of communication - speech, writing, print, electronic devices and the Internet - on human history in the long term. New media are 'pulled' into widespread use by broad historical trends and these media, once in widespread use, 'push' social institutions and beliefs in predictable directions. This allows us to see for the first time what is truly new about the Internet, what is not, and where it is taking us.

Population Health Science Aug 15 2021 **POPULATION HEALTH SCIENCE** formalizes an emerging discipline at the crossroads of social and medical sciences, demography, and economics--an emerging approach to population studies that represents a seismic shift in how traditional health sciences measure and observe health events. Bringing together theories and methods from diverse fields, this text provides grounding in the factors that shape population health. The overall approach is one of consequentialist science: designing creative studies that identify causal factors in health with multidisciplinary rigor. Distilled into nine foundational principles, this book guides readers through population science studies that strategically incorporate: - macrosocial factors - multilevel, lifecycle, and systems theories - prevention science fundamentals - return on investment - equity and efficiency

Harnessing the power of scientific inquiry and codifying the knowledge base for a burgeoning field, POPULATION HEALTH SCIENCE arms readers with tools to shift the curve of population health.

Communities in Action Dec 07 2020 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable; such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The Cause and Prevention of Yellow Fever Aug 03 2020 **The Causes and Consequences of Chromosomal Aberrations** Oct 24 2019 *The Causes and Consequences of Chromosomal Aberrations* explores one of the most dramatic examples of genomic instability-chromosomal aberrations. It describes some of the more recent techniques used to map genes within the human genome, study chromosomal aberrations at the cellular level, and define the organization of the interphase nucleus. General overviews are provided to build a conceptual framework for understanding the generality and specificity of chromosomal aberrations. *The Causes and Consequences of Chromosomal Aberrations* also explores the role of recombinases and topoisomerases in the development of chromosomal aberrations. It contains studies of chromosomal aberrations, which offer separate instructive treatises on specific malignancies. *The Causes and Consequences of Chromosomal Aberrations* is useful to medical and graduate students, physicians, molecular biologists, and cytogeneticists. It will benefit anyone interested in the concepts, contributions, and development in the field of molecular cytogenetics.

Why Am I Sick? Sep 15 2021 Behind all chronic diseases there is a myriad of causes that keep the disease alive. Simply suppressing the symptoms with medications will not help to eliminate the underlying causes. This book discusses many of the "hidden" causes that are often overlooked in chronic disease and what you can do about them using Natural healing protocols. Topics such as toxins, nutritional deficiencies, electromagnetic fields, digestive disorders, tooth foci and psychoemotional and Spiritual causes are discussed. There are chapters on the Holistic Model of Health, finding the causes of your disease, effect of toxins, heavy metals, parasites, Candida, food intolerances, electromagnetic fields, geopathic stress, tooth foci and natural treatment protocols to help with all these.

Epidemiology: A Very Short Introduction Aug 24 2022 What is epidemiology? What are the causes of a new disease? How can pandemics be prevented? Epidemiology is the study of the changing patterns of disease and its main aim is to improve the health of populations. It's a vital field, central to the health of society, to the identification of causes of disease, and to their management and prevention. Epidemiology has had an impact on many of medicine: from discovering the relationship between tobacco smoking and lung cancer, to the origin and spread of new epidemics. However, it is often poorly understood, largely due to misrepresentations in the media. In *A Very Short Introduction* Rodolfo Saracci dispels some of the myths surrounding the study of epidemiology. He provides a general explanation of the principles behind clinical trials, and explains the nature of basic statistics concerning disease. He also looks at the ethical and political issues related to obtaining and using information concerning patients, and trials involving placebos. **ABOUT THE SERIES:** The *Very Short Introductions* series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, and ideas, and enthusiasm to make interesting and challenging topics highly readable.

The Causes and Consequences of Interest Theory Dec 31 2022 Interest has always been a part of humans' daily economic life, and the concept of interest has attracted intense attention from economists, philosophers, religious scholars and lawmakers. This book analyses the issue of prohibition of interest through the lens of conventional economics and then makes a comparison with the position of Islamic economists. It evaluates the theory of interest presented by Böhm-Bawerk, which is the most respected and applicable theory at present. It provides an in-depth analysis of the current literature, and it is the first book to scrutinize the interpretation of Islamic economist concepts of time preference and interest rate control. This book will be of interest to academics and students of economics and Islamic economics.

War and Democracy Sep 23 2019 **Reading Proclus and the Book of Causes, Volume 3: On Causes and the Noetic Triad** Aug 27 2022 This volume gathers contributions on key concepts elaborated in the Platonic tradition (Proclus, Plotinus, Porphyry or Sallustius) and reconsidered by Arabic (e.g. Avicenna, the Book of Causes), Byzantine (e.g. Maximus the Confessor, Ioane Petritsi) and Latin authors (e.g. Albert the Great, Thomas Aquinas etc.). **The Causes and Progression of Desertification** Mar 10 2021 This book provides an examination into the causes and prospects of desertification through a systematic review of 132 sub national case studies. It uses a meta-

analytical model to determine whether proximate causes and underlying driving forces fall into any patterns, to identify mediating factors, feedbacks, cross-scalar dynamics and typical pathways. It shows a limited set of core variables in varying combinations to drive desertification. Most prominent root causes are climatic factors, institutions, national policies, population growth and remote economic influences that lead to local cropland expansion, overgrazing and infrastructure extension, associated with desertification as a potential but not necessary outcome. Some factors are geographically robust: most of them are region and time specific.

War Stories Dec 27 2019 How does the American public formulate its opinions about U.S. foreign policy and military engagement abroad? War Stories argues that the media systematically distort the information the public needs to determine whether to support such initiatives, for reasons having more to do with journalists' professional interests than the merits of the policies, and that this has significant consequences for national security. M. Baum and Tim Groeling develop a "strategic bias" theory that explains the foreign-policy communication process as a three-way interaction among the press, political elites, and the public, each of which has distinct interests, biases, and incentives. Do media representations affect public support for the president and faithfully reflect events in times of diplomatic crisis and war? How do new media--especially Internet news and more partisan outlets--shape public opinion, and how will they alter future conflicts? In answering such questions, Baum and Groeling take an in-depth look at media coverage, elite rhetoric, and public opinion during the Iraq war and other conflicts abroad. They trace how traditional and new media select stories, how elites frame and sometimes even distort events, and how these dynamics shape public opinion over the course of a conflict. Most of us learn via everything we know about foreign policy from media reporting of elite opinions. In War Stories, Baum and Groeling reveal precisely what this means for the future of American foreign policy.

The Causes of Epilepsy Apr 30 2020 Causation is an aspect of epilepsy neglected in the scientific literature and in the conceptualization of epilepsy at a clinical and experimental level. It was to remedy this deficiency that this book was conceived. The book opens with a draft etiological classification that goes some way to filling the nosological void. The book is divided into four etiological categories: idiopathic, symptomatic, cryptogenic, and provoked epilepsies. Each chapter considers topics in a consistent fashion, dealing with the phenomenon of epilepsy in each etiology, including its epidemiology, clinical features and prognosis, and any specific aspects of treatment. The book is a comprehensive reference work, a catalogue of all important causes of epilepsy, and a clinical tool for all clinicians dealing with patients who have epilepsy. It is aimed at epileptologists and neurologists and provides distillation of knowledge in a form that is helpful in the clinical setting.

Proklu diadochu Stoicheiosis theologika May 24 2022 Proclus' Elements of Theology is a concise summa of the Neoplatonic system in its fully developed form: and for the student of late Greek thought second in importance only to the Enneads of Plotinus. Professor Dodds has provided a critical text based on a personal examination of some forty manuscripts, together with an English translation and a philosophical and linguistic commentary. First published in 1933, this second edition includes an Appendix of Addenda et Corrigenda and is widely regarded and respected as the definitive edition of the text today.

The Root Causes of Biodiversity Loss Aug 22 2019 The world is losing species and biodiversity at an unprecedented rate. The causes go deep and the losses are driven by a complex array of social, economic, political and biological factors at different levels. Immediate causes such as over-harvesting, pollution and habitat change have been well studied, but the socioeconomic factors driving people to degrade their environment are less well understood. This book examines the underlying causes. It provides analyses of a range of case studies from Brazil, Cameroon, China, Danube River Basin, India, Mexico, Pakistan, Philippines, Tanzania and Vietnam, and integrates them into a new and interdisciplinary framework for understanding what is happening. From these results, the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends. It makes a contribution to the understanding of all those - from ecologists and conservationists to economists and policy makers - working on one of the major challenges we face.

The Politics of Economic Leadership Jul 14 2021 The American president is widely viewed by the public and media as the nation's single most influential political and economic figure. But social scientists have often concluded that presidential words fall "on deaf ears" or have little lasting impact on policy or public opinion. Then why did Bill Clinton make 12,798 public references to the economy during his eight years in office compared with Harry Truman's mere 2,124 during his own two terms? Why George W. Bush's 3,351 remarks during his first term? Did all these words matter? The Politics of Economic Leadership is the first comprehensive effort to examine whether, why, and how presidents talk about the economy, as well as whether the president's economic rhetoric matters. It demonstrates conclusively that such presidential words do matter. Using an unprecedented compendium of known unique statements by U.S. presidents about the economy from World War II through the first George W. Bush administration, Dan Wood measures the relative intensity and optimism of presidents' economic rhetoric. His pathbreaking statistical analysis shows that presidential words can affect everything from approval of the president's job performance to perceptions of economic news, consumer confidence, consumer behavior, business investment, and interest rates. The impacts are both immediate and gradual. Ultimately, Wood concludes, rhetoric is indeed a tool of presidential leadership that can be used unilaterally to affect a range of political and economic outcomes.

The Sedated Society Jan 26 2020 This edited volume assembles a team of global experts in critical psychopharmacology to address the causes and consequences of our current psychiatric prescribing epidemic. Over 15% of the UK public takes a psychiatric medication on any given day, and the numbers are only set to increase. Placing this figure alongside emerging clinical and scientific data exposing the poor outcomes and harms these medications often cause, this book reveals that their commercial success cannot be explained by their therapeutic efficacy. The chapters reveal how pharmaceutical sponsorship and marketing, diagnostic inflation, the manipulation and burying of negative clinical trials, lax medication regulation, and neoliberal public health policies have all been implicated in ever-rising psychopharmaceutical consumption. This volume will ignite a long-overdue public debate - informing clinical, academic, public and political communities about the harms of over-reliance on psychiatry drugs and the necessity for root and branch reform.

Cross-national Policy Convergence Oct 17 2021 A fresh analysis of policy convergences across nations, which identifies their key driving forces. To what extent and in which direction can we empirically observe a convergence of national policies? In which areas and for which patterns of policy is convergence more or less pronounced? This text addresses these central questions with clarity and rigour. With growing economic and institutional interlinkages between nation states, it is often assumed that there is an overall trend towards increasingly similar policies across countries. Comparative research on the domestic impact of globalization and European integration, however, reveals that policy convergence can hardly be considered as a dominant and uniform tendency which can be taken for granted. Although a number of factors have been suggested in order to account for the rather mixed empirical picture, we still have limited knowledge about the causes and conditions of cross-national policy convergence. In particular, the central mechanisms and conditions affecting both degree and level of cross-national policy convergence are yet not well understood. This book will be of great interest to all students and scholars of the European Union, European politics, and international relations. This is a special issue of the leading Journal of European Public Policy.

Unhomely Empire Sep 03 2020 This book examines the role of Scottish Enlightenment ideas of belonging in the construction and circulation of white supremacist thought that sought to justify British imperial rule. During the 18th century, European imperial expansion radically increased population mobility through the forging of new trade routes, war, disease, enslavement and displacement. In this book, Onni Gust argues that this mass movement intersected with philosophical debates over what it meant to belong to a nation, civilization, and even humanity itself. Unhomely Empire maps the consolidation of a Scottish Enlightenment discourse of 'home' and 'exile' through three inter-related case studies and debates: slavery and abolition in the Caribbean, Scottish Highland emigration to North America, and raising white girls in colonial India. Playing out over poetry, political pamphlets, travel writing, philosophy, letters and diaries, these debates offer a unique insight into the movement of ideas across a British imperial literary network. Using this rich cultural material, Gust argues that whiteness was central to 18th century liberal imperialism's understanding of belonging, whilst emotional attachment and the perceived ability, or inability, to belong were key concepts in constructions of racial difference.
