Technical Communication and the World Wide Web Sep 02 2022 Over the past decade, the World Wide Web has dramatically changed the face of technical communication, but the teaching of writing has thus far altered very little to accommodate this rapidly changing context. *Technical Communication and the World Wide Web* offers substantial and broadly applicable strategies for teaching global communication issues affecting writing for the World Wide Web. Editors Carol Lipson and Michael Day have brought together an exceptional group of experienced and well-known teacher-scholars to develop this unique volume addressing technical communication education. The chapters here focus specifically on curriculum issues and the teaching of technical writing for the World Wide Web, contributing a blend of theory and practice in proposing changes in curriculum and pedagogy. Contributors offer classroom examples that teachers at all levels of experience can adapt for their own classes. The volume provides comprehensive coverage of the technical communication curriculum, from the two-year level to the graduate level; from service courses to degree programs. This volume is an important and indispensable resource for technical writing educators, and it will serve as an essential reference for curriculum and pedagogy development in technical communication programs.

The collection covers an expansive breadth of issues and topics that speak to the complexities of undertaking advocacy work in TPC, including local grant writing activities, cosmopolitanism and global transnational rhetoric, digital citizenship and social media use, strategic and tactical communication, and diversity and social justice. The contributors themselves, representing fifteen academic institutions and occupying various academic ranks, offer nuanced definitions, frameworks, examples, and strategies for students, scholars, practitioners, and educators who want to or are already engaged in a variegated range of advocacy work. More so, they reinforce the inherent humanistic values of our field and discuss effective rhetorical and current technological tools at our disposal. Finally, they show us how, through pedagogical approaches and everyday mundane activities and practices, we (can) advocate either actively or passively.

Rhetorical Accessibility Jul 28 2019 Veterinary medicine has long been recognized as one of the more neglected areas of medical history. One of the main stumbling blocks to research is the lack of comprehensive information regarding the survival and availability of primary source material. *Veterinary Medicine: A Guide to Historical Sources* redresses these issues for the first time, offering researchers an unparalleled tool with which to approach the subject. The book opens with a brief history of veterinary medicine and the veterinary profession from the fourteenth to the beginning of the twenty first centuries, identifying the key dates and events that shaped their development. There then follows a chapter on the nature and uses of the records covered by the book, outlining the types of records found, the type of information they contain and their likely uses by different types of researcher. A brief user's guide then explains how to use the book. After these preliminary sections, comes the main body of the book, the lists of records. It is here that the various practices and institutions covered by the book are listed, together with the types of records they hold, the dates they cover and where they are kept. A short biographical history is also included with each entry where appropriate. Taken as a whole this volume will prove to be an invaluable aid for any scholar, researching the history of veterinary medicine in Britain.

Communicating Race, Ethnicity, and Identity in Technical Communication Jun 06 2020 The purpose of this book is to move our field's discussion beyond issues of diversity in the practice of technical communication, which is certainly important, to include discussions of how race and ethnicity inform the production and distribution of technical communication in the United States. Equally important, this book is an attempt to uncover those communicative practices used to adversely affect historically marginalized groups and identify new practices that can be used to encourage cultural competence within institutions and communities. This book, like our field, is an interdisciplinary effort. While all authors have taught or practiced technical communication, their backgrounds include studies in technical communication, rhetoric and composition, creative writing, and higher education. For the sake of clarity, the book is organized into five sections: historical representations of race and ethnicity in health and science communication; social justice and activism in technical communication; considerations of race and ethnicity in social media; users' right to their own language; and communicating identity across borders, cultures, and disciplines.
