Lugosi Dec 15 2020 He was born Béla Ferenc Dezso Blasko on October 20, 1882, in Hungary. He joined Budapest's National Theater in 1913 and later appeared in several Hungarian films under the pseudonym Arisztid

Olt. After World War I, he helped the Communist regime nationalize Hungary's film industry, but barely escaped arrest when the government was deposed, fleeing to the United States in 1920. As he became a star in American horror films in the 1930s and 1940s, publicists and fan magazines crafted outlandish stories to create a new history for Lugosi. The cinema's Dracula was transformed into one of Hollywood's most mysterious actors. This exhaustive account of Lugosi's work in film, radio, theater, vaudeville and television provides an extensive biographical look at the actor. The enormous merchandising industry built around him is also examined.

The Complete Technology Book on Minerals & Mineral Processing Aug 30 2019 Mineral is defined as a naturally occurring solid chemical substance formed through biogeochemical processes, having characteristic chemical composition, highly ordered atomic structure, and specific physical properties. By comparison, a rock is an aggregate of minerals and/or mineraloids and does not have a specific chemical composition. Mineral resources of India are sufficiently rich and varied to provide the country with strong industrial base. The country is particularly rich in metallic minerals of the ferrous group such as iron ores, manganese etc. It has the world largest reserves in mica and bauxite. In the field of extractive metallurgy, mineral processing, also known as mineral dressing or ore dressing, is the process of separating commercially valuable minerals from their ores. Mining is the extraction of valuable minerals or other geological materials from the earth, from an ore body; the term also includes the removal of soil. Materials recovered by mining include base metals, precious metals, iron, uranium, limestone, etc. There are three methods of mining; conventional or manual mining, semi mechanised mining and mechanised mining. Geopolymerisation is the processes which can transfer large scale alumina silicate wastes into value added geopolymeric products with sound mechanical strength and high acid, fire and bacterial resistance. One of many useful applications of geopolymerisation is the immobilization of heavy metals and radioactive elements. The production of non ferrous metals from natural mineral ores is, in general, highly energy intensive. Some of the non ferrous mineral sources are bauxite, granite, magnesite, limonite etc. Limestone is a sedimentary rock composed largely of the minerals calcite and aragonite, which are different crystal forms of calcium carbonate (CaCO₃). Limestone processing includes several steps; primary crushing (jaw crusher, gyratory crusher, impact breaker), secondary crushing (cone crusher), fine grinding and pulverization, conveying, screening, washing, heavy media separation, optical mineral sorters, drying and storage. The non metallic mineral mining and quarrying industry segment covers a wide range of mineral extraction. Most of these minerals are found in abundance close to the surface, so underground mining is uncommon in this industry segment. Mineral resources of India are sufficiently rich and varied to provide the country with strong industrial base. The country is particularly rich in metallic minerals of the ferrous group such as iron ores, manganese etc. It has the world largest reserves in mica and bauxite. This book basically deals with methods of mining, mining machineries, geopolymerisation of mineral products and waste, industrial and scientific aspects of non ferrous metals production, processing of alumina rich Indian iron ore slimes, limestone processing, limestone exploration and extraction, the mineralogy of asbestos, the use of asbestos and asbestos free substitutes in buildings, flotation column ;a novel technique in mineral processing, applications of thermal plasma in the synthesis of covalent carbides, nitrogenous fertilizers, manufacture of ammonium bicarbonate etc. This book is designed to describe the details of mining and processing of different minerals like alumina rich iron ore slimes, conversion of waste to a high valued product, lime stone, asbestos, coal beneficiation, gravity concentration processes to recover values from coal and ore fines and many more. The book is meant for everyone who wants to study about the subject or wants to venture into the field of mineral processing.

The Films of Randolph Scott Jan 16 2021 Reclusive American actor Randolph Scott, known for his subtle, dignified performances in almost 60 westerns, has been called the "most genuine Westerner." His career began in 1928 with the first of several bit parts; his first starring role was 1932's Heritage of the Desert. He fought in World War I, studying horsemanship, shooting, and bayoneting, and acted in a variety of films in every genre from musical to swashbuckler. His final film was Ride the High Country (1962). Chronologically arranged from his birth in 1898 to his death in 1987, this book covers every film in which Randolph Scott acted. Each section begins with a biographical chapter and then lists Scott's films from that period: each film's entry has filmographic information, a synopsis, and detailed commentary, discussing such topics as the financial aspects, production details, acting, other participants, anecdotes, and critical responses. Quotes from interviews with figures in the industry and published reviews bolster the entries. A bibliographical essay completes the work, which is heavily illustrated with stills and promotional materials.
