Aug 01 2020 This two-book bundle gathers both novels of Gloria Ferris's darkly comic mystery series, starring the inimitable Bliss Moonbeam Cornwall and her boyfriend, fellow sleuth, and often reluctant accomplice Neil Redfern. Includes: A Shroud of Roses

(New!) The Class of 2000 left behind a skeleton in its closet, and fifteen years later a killer is coming for the rest of the graduates, including none other than Bliss Moonbeam Cornwall. Against their better judgement, Cornwall and Redfern team up to expose the killer before time — or Cornwall's talent for stumbling into danger — gets the best of them. Corpse Flower The quick slide from country club to trailer park leaves Bliss Moonbeam Cornwall with only one reason to get up in the morning — revenge. But revenge takes money, and Bliss abandons common sense to get it. And she needs Chief Redfern, a former drug cop from Toronto, to stay out of her way and quit eyeing her with suspicion.

**Motorcycle Accident Reconstruction** Sep 02

2020 Accident reconstruction utilizes principles

of physics and empirical data to analyze the physical, electronic, video, audio, and

testimonial evidence from a crash, to determine how and why the crash occurred, how the crash

could have been avoided, or to determine whose description of the crash is most accurate. This process draws together aspects of mathematics, physics, engineering, materials science, human factors, and psychology, and combines analytical models with empirical test data. Different types of crashes produce different types of evidence and call for different analysis methods. Still, the basic philosophical approach of the reconstructionist is the same from crash type to crash type, as are the physical principles that are brought to bear on the analysis. This book covers a basic approach to accident reconstruction, including the underlying physical principles that are used, then details how this approach and the principles are applied when reconstructing motorcycle crashes. This second edition of *Motorcycle Accident Reconstruction* presents a thorough, systematic, and scientific overview of the available methods for reconstructing motorcycle crashes. This new edition contains: Additional theoretical models,

examples, case studies, and test data. An updated bibliography incorporating the newest studies in the field. Expanded coverage of the braking capabilities of motorcyclists. Updated, refined, and expanded discussion of the decelerations of motorcycles sliding on the ground. A thoroughly rewritten and expanded discussion of motorcycle impacts with passenger vehicles. Updated coefficients of restitution for collisions between motorcycles and cars. A new and expanded discussion of using passenger car EDR data in motorcycle accident reconstruction. A new section covering recently published research on post-collision frozen speedometer readings on motorcycles. A new section on motorcycle interactions with potholes, roadway deterioration, and debris and expanded coverage of motorcycle falls. This second edition of *Motorcycle Accident Reconstruction* is a must-have title for accident reconstructionists, forensic engineers, and all interested in understanding why and how motorcycle crashes

occur.
