McClellanville and the St. James, Santee Parish Sep 28 2022 A creekside village established in 1858 on land formerly inhabited by Sewee Indians, McClellanville began as a summer resort for nearby planter families escaping malarial mosquitoes. It is now a fishing village with an artistic climate amid restored Victorian properties. The larger St. James Santee Parish retains historic rice plantations and other landmarks of Colonial America and the antebellum South. Both parish and village are protected from coastal sprawl by the maritime forests and estuaries of Cape Romain National Wildlife Refuge, Francis Marion National Forest, and Santee Coastal Reserve. Inside this book are images of the villagers named McClellan, Morrison, Leland, Lofton, and Graham, as well as famous parishioners Jonathan Lucas, Eliza Lucas Pinckney, Archibald Rutledge, David Doar, and Thomas Pinckney. DuPre House, the town's oldest residence, is shown, plus other historic village homes and churches, along with Fairfield Plantation, Hampton Plantation (now a state park), and other parish plantations and sites.

Fundamentals of Sustainable Chemical Science Jan 27 2020 Written by Stanley Manahan, Fundamentals of Sustainable Chemical Science has been carefully designed to provide a basic introduction to chemistry, including organic chemistry and biochemistry, for readers with little or no prior background in the subject. Manahan, bestselling author of many environmental texts, presents the material in a practical [Shrimp Highway](#) May 01 2020 Known as the Coastal Highway, U.S. Route 17 runs along the Eastern Seaboard from Punta Gorda, Florida, to Winchester, Virginia, passing many of the prime shrimping waters in the southern United States. Visiting remote ports-of-call cluttered with trawlers, and the many eateries along the route--some established, some obscure--the author explores the Lowcountry shrimping culture and presents a colorful profile of the "17-ers," the eccentric lifetime residents of the highway corridor.

Organophosphorus Chemistry Sep 24 2019 Organophosphorus Chemistry provides a comprehensive annual review of the literature.

Coverage includes phosphines and their chalcogenides, phosphonium salts, low coordination number phosphorus compounds, penta- and hexa-coordinated compounds, trivalent phosphorus acids, nucleotides and nucleic acids, ylides and related compounds, and phosphazenes. The series will be of value to research workers in universities, government and industrial research organisations, whose work involves the use of organophosphorus compounds. It provides a concise but comprehensive survey of a vast field of study with a wide variety of applications, enabling the reader to rapidly keep abreast of the latest developments in their specialist areas.

Trace Elements in Man and Animals 6 Jul 15 2021 This book is the published proceedings of the Sixth International Symposium on Trace Element Metabolism in Man and Animals. The Symposium was held at the Asilomar Conference Center in Pacific Grove, California, U.S.A. from May 31 through June 5, 1987. The decision to hold TEMA-6 at Asilomar was made at TEMA-5 in 1985. The International Guidance Committee decided to hold the meeting in California in part to recognize the significant contributions made to the field of trace element metabolism by Professor Lucille S. Hurley. As such, she was the obvious choice as chair of the local organizing committee. One of the principal goals of Professor Hurley was that TEMA-6 serve as a forum for discussing the use and application of newer methodologies, such as molecular biology, computer modelling and stable isotopes, in studies of trace element metabolism. Based on the comments which the local organizing committee has received, this goal was achieved. The Symposium was attended by 275 scientists from 32 countries covering 6 continents. Twenty-five speakers were chosen for our plenary sessions.

The Immunogenetics of Dermatologic Diseases Jun 13 2021 This book intends to investigate the broad spectrum of genetic changes in immunological processes involved in cutaneous diseases. One of the main goals of immunogenetic studies is finding susceptibility genes for complex diseases. This can provide an insight into the pathogenesis of the condition in a way that is not easily achievable through other kinds of studies. Thus they are a rational initial step for generating hypotheses about disease pathogenesis. This may especially benefit dermatology, a field notorious for having too many diseases with unknown etiologies. Immunogenetic investigations have made targeted treatment strategies possible for diseases such as psoriasis and pemphigus. Even though these strategies have revolutionized the management of chronic dermatological conditions such as psoriasis, still there are a lot of unanswered questions. For instance, psoriasis patients respond very differently to each of the commercially available biological agents. This diversity could be partially explained by the differences in the sets of genes responsible for disease induction in each individual. Thus whole genome sequencing strategies, if feasible at individual levels, might help in tailoring these targeted treatments based on specific genetic backgrounds. Our intention in preparing this book was to explore the broad spectrum of the genetic aspects of immunological processes involved in cutaneous diseases. We have tried to cover most areas of dermatology where enough studies were available to gather a chapter. Still, there is a substantial lack of knowledge on the immunogenetics of many dermatological conditions. We hope that this book would encourage the investigators to fill these gaps of knowledge.

Organic Chemistry Jan 01 2023 Organic Chemistry, 11th Edition continues its tradition of excellence in teaching and preparing students for success in the organic classroom and beyond. A central theme of the authors' approach to organic chemistry is to emphasize the relationship between structure and reactivity. To accomplish this, the text is organized in a way that combines the most useful features of a functional group approach with one largely based on reaction mechanisms. Emphasizing mechanisms and their common aspects as often as possible, this book shows students what organic chemistry is, how it works, and what it does in living systems and the physical world around us.

Sara Foster's Southern Kitchen Dec 20 2021 Sara Foster's love of Southern fare began in her Granny Foster's Tennessee kitchen. There, the combination of down-home comfort, fresh-from-the-farm ingredients, and dedicated preparation hooked her for life. Now the award-winning cookbook author and restaurateur serves up nearly two hundred contemporary interpretations of classic dishes—Shrimp Jambalaya, Slow-Roasted Pulled Pork Butt, Cheesy Grits Casserole; refreshing drinks, including Mint Juleps and Sweet Tea; and such satisfying breakfasts as Country Ham and Hominy Hash. And a table wouldn't be Southern without the sides—Skillet-Fried Corn, Creamy Potato Salad, and Arugula Pesto Snap Beans. Be sure, too, to save room for Molasses-Bourbon Pecan Pie and Freestyle Lemon Blackberry Tart. From revealing the secret to fluffy buttermilk biscuits to giving us ideas for swapping out ingredients to accommodate any season, from providing tips for frying up chicken like a true Southerner to detailing barbecue fundamentals that put you on par with any pitmaster, Foster's helpful sidebars ensure that your dishes will turn out perfect every time. You'll also get expert tips on the essential equipment (cast-iron skillets, griddles, casserole dishes) and the ingredients no Southern pantry should be without (from stone-ground grits to Carolina Gold rice). As a bonus, Foster offers her "Sidetracked" feature, profiles of tried-and-true roadtrip destinations throughout the South where you can find the best fried catfish, barbecued brisket, big breakfast plates, and more. And finally, Foster's lessons in pickling and canning guarantee that you can enjoy your favorite flavors all year round. With its handy list of resources and Southern pantry essentials, and entertaining stories, Sara Foster's Southern Kitchen is an all-inclusive collection of Southern cooking in which simple feasts meet artisanal ingredients, traditional tastes meet modern methods, and fantastic flavors make every bite a succulent mouthful of Southern comfort.

Translational Medicine May 13 2021 Translational Medicine: Optimizing Preclinical Safety Evaluation of Biopharmaceuticals provides scientists responsible for the translation of novel biopharmaceuticals into clinical trials with a better understanding of how to navigate the obstacles that keep innovative medical research discoveries from becoming new therapies or even making it to clinical trials. The book includes sections on protein-based therapeutics, modified proteins, oligonucleotide-based therapies, monoclonal antibodies, antibody-drug conjugates, gene and cell-based therapies, gene-modified cell-based therapies, combination products, and therapeutic vaccines. Best practices are defined for efficient discovery research to facilitate a science-based, efficient, and predictive preclinical development program to ensure clinical efficacy and safety. Key Features: Defines best practices for leveraging of discovery research to facilitate a development program Includes general principles, animal models, biomarkers, preclinical toxicology testing paradigms, and practical applications Discusses rare diseases Discusses "What-Why-When-How" highlighting different considerations based upon product attributes. Includes special

considerations for rare diseases About the Editors Joy A. Cavagnaro is an internationally recognized expert in preclinical development and regulatory strategy with an emphasis on genetic medicines.. Her 40-year career spans academia, government (FDA), and the CRO and biotech industries. She was awarded the 2019 Arnold J Lehman Award from the Society of Toxicology for introducing the concept of science-based, case-by-case approach to preclinical safety evaluation, which became the foundation of ICH S6. She currently serves on scientific advisory boards for advocacy groups and companies and consults and lectures in the area of preclinical development of novel therapies. Mary Ellen Cosenza is a regulatory toxicology consultant with over 30 years of senior leadership experience in the biopharmaceutical industry in the U.S., Europe, and emerging markets. She has held leadership position in both the American College of Toxicology (ACT) and the International Union of Toxicology (IUTOX) and is also an adjunct assistant professor at the University of Southern California where she teaches graduate-level courses in toxicology and regulation of biologics.

Fundamentals of Environmental Chemistry, Third Edition Dec 28 2019 Written by an expert, using the same approach that made the previous two editions so successful, Fundamentals of Environmental Chemistry, Third Edition expands the scope of book to include the strongly emerging areas broadly described as sustainability science and technology, including green chemistry and industrial ecology. The new edition includes: Increased emphasis on the applied aspects of environmental chemistry Hot topics such as global warming and biomass energy Integration of green chemistry and sustainability concepts throughout the text More and updated questions and answers, including some that require Internet research Lecturers Pack on CD-ROM with solutions manual, PowerPoint presentations, and chapter figures available upon qualifying course adoptions The book provides a basic course in chemical science, including the fundamentals of organic chemistry and biochemistry. The author uses real-life examples from environmental chemistry, green chemistry, and related areas while maintaining brevity and simplicity in his explanation of concepts. Building on this foundation, the book covers environmental chemistry, broadly defined to include sustainability aspects, green chemistry, industrial ecology, and related areas. These chapters are organized around the five environmental spheres, the hydrosphere, atmosphere, geosphere, biosphere, and the anthrosphere. The last two chapters discuss analytical chemistry and its relevance to environmental chemistry. Manahan's clear, concise, and readable style makes the information accessible, regardless of the readers' level of chemistry knowledge. He demystifies the material for those who need the basics of chemical science for their trade, profession, or study curriculum, as well as for readers who want to have an understanding of the fundamentals of sustainable chemistry in its crucial role in maintaining a livable planet.

Last Light over Carolina Aug 23 2019 Last Light Over Carolina Every woman in the sultry South Carolina low country knows the unspoken fear that clutches the heart every time her man sets out to sea. Now, that fear has become a terrible reality for Carolina Morrison. Her husband, shrimp boat captain Bud Morrison, is lost and alone somewhere in the vast Atlantic fishing grounds, with a storm gathering and last light falling. Over the course of one terrifying, illuminating day, Carolina looks back across thirty years of love and loss, joy and sorrow: How she rejected a well-to-do upbringing to marry Bud and embrace his extraordinary lifestyle by the sea . . . how hard times and loneliness have driven them apart . . . and how, with one mistake, she may have shattered their once-unbreakable bond forever. While their the close-knit community rallies together to search for one of its own, Carolina knows their love must somehow call him home, across miles of rough water and unspeakable memories. New York Times bestselling author Mary Alice Monroe explores a vanishing feature of the southern coastline, the mysterious yet time-honored shrimping culture, in a compelling tale of a strong woman struggling to prove that love is a light that never dies.

US Policy Towards Cuba Mar 30 2020 US Policy Towards Cuba is a comprehensive examination of U.S. policy towards Cuba after the Cold War, from 1989-2008. It discusses the competition between Congress and the executive for control of policy, and the domestic interests which shaped policymaking and led to the passage of two major pieces of legislation (the Cuban Democracy Act of 1992 and the Cuban Liberty and Democratic Solidarity Act of 1996, better known as the Helms-Burton Act) which tightened the embargo on Cuba and were fiercely resisted by U.S. allies. There is also a strong focus on migration as an issue in U.S.-Cuban relations. The book then moves on to examine U.S. policy during the second Clinton administration, when the interest group environment altered for two principal reasons. Firstly the case of the small Cuban rafter boy, Elian Gonzalez, attracted huge media coverage and led to public questioning of the wisdom of current policy, and secondly the agricultural lobby, keen to export to Cuba, lobbied for the Trade Sanctions Reform and Export Enhancement Act, which finally passed in 2000. The final section of the book analyses democracy promotion efforts under President George W. Bush. Seeking to cast light upon the US policymaking process, Gibbs demonstrates that U.S. Cuba policy represents a rather extreme example of the influence of domestic politics on policymaking, and provides a significant contribution to this important and under-researched aspect of U.S. foreign policy.
