Case Studies in Project, Program, and Organizational Project Management

Jul 22 2021 The ever expanding market need for information on how to apply project management principles and the PMBOK® contents to day-to-day business situations has been met by our case studies book by Harold Kerzner. That book was a spin-off from and ancillary to his best selling text but has gained a life of its own beyond adopters of that textbook. All indications are that the market is hungry for more cases while our own need to expand the content we control, both in-print and online would benefit from such an expansion of project management "case content". The authors propose to produce a book of cases that compliment Kerzner's book. A book that offers cases beyond the general project management areas and into PMI®'s growth areas of program management and organizational project management. The book will be structured to follow the PMBOK in coverage so that it can not only be used to supplement project management courses, but also for self study and training courses for the PMP® Exam. (PMI, PMBOK, PMP, and Project Management Professional are registered marks of the Project Management Institute, Inc.)

Culturally Tailored Behavior Based Safety
Jan 28 2022
Culturally Tailored Behavior Based Safety By: David W. Velmosky Every employer wants to maintain workplace safety. However, too often, employers think they need to hire expensive outside help to create and sustain safety. David W. Velmosky knows this isn't true and in Culturally Tailored Behavior Based Safety, he outlines how to create a worker consensus-based safety design that is effective for your facility. Culturally Tailored Behavior Based Safety is a method that uses input from employees at all levels. Your workplace, your employees, are unique - your

workplace safety must be unique as well. Thorough research of each individual facility's culture will give you insight on what the safety solutions are. Corporate leadership needs to develop a democratic approach with facility leadership and workers. When workers feel like they own the safety of their facility and it fully reflects their culture, they will be more engaged in safety. By keeping an open mind and using a positive, cooperative problem solving team approach, your facility can not only decrease but eliminate workplace accidents. Velmosky stresses flexibility and common sense to create a safety blueprint. Real life examples will encourage you to implement targeted safety procedures. Culturally Tailored Behavior Based Safety provides detailed instructions on how to design, communicate, and implement a safety program that will work for your facility. Workplace accidents are not acceptable nor are they inevitable. This book is a must-read for human resources, safety officials, union officials, and everyone working to create a safe and effective work environment. A safety-strong culture creates a productive and welcoming environment for all employees. The Design Quality Manual Dec 03 2019 Everyone involved in a building project wants to achieve a better building but design quality means different things to clients, users, architects, cost consultants and contractors. Negotiating design priorities is an important part of the development process. The Design Quality Manual helps give an objective evaluation of the qualitative aspects of design. Matrices with five defined levels of quality have been developed that cover the key areas of architecture, environmental engineering, user comfort conditions, whole-life costs, detail design and user satisfaction. These can be scored by a visual survey and professional judgement and then augmented by scientific measurement where possible (e.g. temperature, lighting and sound levels). The resultant scores allow comparisons in terms of overall and specific aspects of building performance and design quality. The Manual covers schools, hospitals and housing and offers a set of criteria by which to judge a broad range of design values; it focuses the design team on the needs of the end user and on the overall building performance.
