Health Technology Assessment in Japan Nov 03 2020

Representing the first book on the topic, this work offers the reader an introduction to the Japanese systems for health technology assessment (HTA) officially introduced by the Ministry of Health, Labour and Welfare (MHLW) in 2016. Policy and guidelines are discussed, with the relevant methods and conditions of cost-effectiveness analysis explained alongside. Numerous instructive examples and exercises, ranging from basic to advanced, impart valuable knowledge and insight on the quantitative methods for economic evaluation, which will appeal to both beginners and experts. This guidebook is authored by Japan's foremost expert in HTA and pharmacoeconomics, with a view to strengthening the reader's expertise in value-based healthcare and decision-making. The methods presented are essential to informing regulatory, local and patient decisions; as such, the book is equally recommended to industry and government, as well as academia, and anyone with an interest in Japanese HTA.

Software Development Failures Jun 29 2020 An empirically based study of why software development failures happen, and the lessons we can learn. Failed or abandoned software development projects cost the U.S. economy alone billions of dollars a year. In *Software Development Failures*, Kweku Ewusi-Mensah offers an empirically grounded study that suggests why these failures happen and how they can be avoided. Case studies analyzed include the well-known Confirm travel industry reservation program, FoxMeyer's Delta, the IRS's Tax System Modernization, the Denver International Airport's Baggage Handling System, and CODIS. It has been estimated that one-third of software development projects fail or are abandoned

outright because of cost overruns, delays, and reduced functionality. Some consider this an acceptable risk—that it is simply the cost of doing business. Ewusi-Mensah argues that understanding the factors involved in development failures will help developers and businesses bring down the rate of software failure and abandoned projects. Ewusi-Mensah explores the reasons software development projects are vulnerable to failure and why issues of management and organization are at the core of any failed project. He examines these projects not from a deterministically technical perspective but as part of a complex technical and social process; he proposes a framework of factors that contribute to the decision to abandon a project and enumerates the risks and uncertainties inherent in each phase of a project's life cycle. Exploring the multiplicity of factors that make software development risky, he presents empirical data that is reinforced by analyses of the reported cases. He emphasizes the role of the user in the development process and considers the effect of organizational politics on a project. Finally, he considers what lessons can be learned from past failures and how software development practices can be improved.

Experience the story of Shaina Desai, who finds herself in the middle of a sinister plot to steal her prized invention, which happens to be the principal subject of valuation for a multi-million dollar cross-border investment in what could be termed as one of the most brutal attempts at intellectual property theft in the history of corporate India. Will she be forced to give up her dream to save her son's life? Or will she lose him to the ruthless kidnappers? A tale of professional pride and the heart-breaking choices forced upon the individual, of love and betrayal, and the dark games ruthlessly played in the corporate world, under the veneer of professional ethics...

Queer and Trans People of Colour in the UK Dec 04 2020

This book explores the meanings of Queer and Trans People of Colour (QTPOC) activist groups in the UK, considering the tensions around inclusion and belonging across lesbian, gay, bisexual, trans, and queer (LGBTQ) and of colour communities and wider British society. Davis draws de/anti-/post-colonial, Black feminist, and queer theory into critical psychology to publish the first book of its kind in the UK, developing an intersectional understanding of QTPOC subjectivities and identities. The book examines questions of belonging; racial melancholia; decolonising gender and sexualities; and the joys, erotics, and the difficulties of building and finding QTPOC community that can hold and celebrate our intersectional richness. Offering a radical and critical intervention into psychology, this volume will be of key interest to scholars in Gender Studies and Queer Studies, Psychology and Race, together with activists, community organisers, counsellors and the third sector.

Software Development Tools Oct 22 2019 This text contains the proceedings of a workshop on software development tools, held at Pingree Park, Colorado in May, 1979. The workshop, for which we were co-chair men, was primarily, but not exclusively, concerned with a variety of tools supporting pre-implementation phases of software development. The workshop brought together researchers and practitioners from industrial, governmental, and academic sectors to compare and assess current work and to set some directions for future work in this emerging technical area. The fifty participants represented research and development efforts in software tools within the United States, Canada, France, Great Britain, and Japan. (A list of participants appears at the end of the text.) Sponsorship was provided by the National Aeronautics and Space Administration, the National Bureau of Standards, the National Science Foundation, and Digital Equipment Corporation. The conference consisted of seven formal sessions and numerous organized and impromptu discussions. Each session (except the last) included invited papers, prepared remarks by discussants, and an open discussion.

Effective Software Maintenance and Evolution Sep 25 2022 With software maintenance costs averaging 50% of total computing costs, it is necessary to have an effective maintenance program in place. Aging legacy systems, for example, pose an especially rough challenge as veteran programmers retire and their successors are left to figure out how the systems operate. This book explores program analyzers, reverse engineering tools, and reengineering tools in-depth and explains the best ways to deploy them. It also discusses using XML-based tools, the roles of software components, object technology, and metaprogramming in improving systems maintenance, as well as how to align software with business goals through strategic maintenance.

Writing the City in British Asian Diasporas Feb 06 2021 In 1962, the Commonwealth Immigrants Act hastened the process of South Asian migration to postcolonial Britain. Half a decade later, now is an opportune moment to revisit the accumulated writing about the diasporas formed through subsequent settlement, and to probe the ways in which the South Asian diaspora can be re-conceptualised. *Writing the City in British Asian Diasporas* takes a fresh look at such matters and will have multi-disciplinary resonance worldwide. The meaning and importance of local, multi-local and trans-local dynamics is explored through a devolved and regionally-accented comparison of five British Asian cities: Bradford, the East End of London, Manchester, Leicester and Birmingham. configured cities since the 1960s, its main focus is the significant discrepancies in representation between differently-positioned texts reflecting both dominant institutional discourses and everyday lived experiences of a locality. Part I offers a comprehensive, yet still highly contested, reading of each city's archives. Part II examines how the arts and humanities fields of History, Religion, Gender and Literary/Cultural Studies have all written British Asian diasporas, and how their perspectives might complement the better-established agendas of the social sciences. Providing an innovative analysis of South Asian communities and their multi-local identities in Britain today, this interdisciplinary book will be of interest to scholars of South Asian Studies, Migration, Ethnic and Diaspora Studies, as well as Sociology, Anthropology, and Geography.

Nanobiotechnology in Bioformulations Apr 08 2021 With the recent shift of chemical fertilizers and pesticides to organic agriculture, the employment of microbes that perform significant beneficial functions for plants has been highlighted. This book presents timely discussion and coverage on the use of microbial formulations, which range from powdered or charcoal-based to solution and secondary metabolite-based bioformulations. Bioformulation development of biofertilizers and biopesticides coupled with the advantages of nanobiotechnology propose significant applications in the agricultural section including nanobiosensors, nanoherbicides, and smart transport systems for the regulated release of agrochemical. Moreover, the formulation of secondary metabolites against individual phytopathogens could be used irrespective of geographical positions with higher disease incidences. The prospective advantages and uses of nanobiotechnology generate tremendous interest, as it could augment production of agricultural produce while being cost-

effective both energetically and economically. This bioformulation approach is incomparable to existing technology, as the bioformulation would explicitly target the particular pathogen without harming the natural microbiome of the ecosystem. Nanobiotechnology in Bioformulations covers the constraints associated with large-scale development and commercialization of bioinoculant formations. Furthermore, exclusive emphasis is placed on next-generation efficient bioinoculants having secondary metabolite formulations with longer shelf life and advanced competence against several phytopathogens. Valuable chapters deal with bioformulation strategies that use divergent groups of the microbiome and include detailed diagrammatic and pictorial representation. This book will be highly beneficial for both experts and novices in the fields of microbial bioformulation, nanotechnology, and nano-microbiotechnology. It discusses the prevailing status and applications available for microbial researchers and scientists, agronomists, students, environmentalists, agriculturists, and agribusiness professionals, as well as to anyone devoted to sustaining the ecosystem.
