blissful when she encounters the world of rural pot cultivation. From country club to trailer park ... Swindled out of a fair divorce settlement, former socialite Bliss Moonbeam Cornwall works a number of part-time jobs to pay the rent on a rundown trailer and keep her motorcycle on the road. House cleaner, yoga teacher, library assistant, cemetery groundskeeper, drudge for her agoraphobic cousin - the work never ends. But Bliss still can't save enough money for another day in court. So, when her cousin offers her a generous fee to find a pollinating mate for his giant jungle plant, she agrees to help. How hard can it be? That's when she discovers that her neighbours, employers, and even her cousin are involved in a string of illegal activities - including grow-ops and suspicious deaths. Police Chief Neil Redfern's persistent scrutiny is interfering with her goal, and Bliss suspects he himself may be up to his badge in the crimes he's "investigating." With no one to back her up, Bliss must make a decision: she can give up on her dream, or she can start fighting dirty. Either way, she risks becoming another murder victim.

Motorcycle Accident Reconstruction Sep 01 2020 Accident reconstruction utilizes principles of physics and empirical data to analyze the physical, electronic, video, audio, and testimonial evidence from a crash, to determine how and why the crash occurred, how the crash could have been avoided, or to determine whose description of the crash is most accurate. This process draws together aspects of mathematics, physics, engineering, materials science, human factors, and psychology, and combines analytical models with empirical test data. Different types of crashes produce different types of evidence and call for different analysis methods. Still, the basic philosophical approach of the reconstructionist is the same from crash type to crash type, as are the physical principles that are brought to bear on the analysis. This book covers a basic approach to accident reconstruction, including the underlying physical principles that are used, then details how this approach and the principles are applied when reconstructing motorcycle crashes. This second edition of Motorcycle Accident Reconstruction presents a thorough, systematic, and scientific overview of the available methods for reconstructing motorcycle crashes. This new edition contains: Additional theoretical models, examples, case studies, and test data. An updated bibliography incorporating the newest studies in the field. Expanded coverage of the braking capabilities of motorcyclists. Updated, refined, and expanded discussion of the decelerations of motorcycles sliding on the ground. A thoroughly rewritten and expanded discussion of motorcycle impacts with passenger vehicles. Updated coefficients of restitution for collisions between motorcycles and cars.

A new and expanded discussion of using passenger car EDR data in motorcycle accident reconstruction. A new section covering recently published research on post-collision frozen speedometer readings on motorcycles. A new section on motorcycle interactions with potholes, roadway deterioration, and debris and expanded coverage of motorcycle falls. This second edition of Motorcycle Accident Reconstruction is a must-have title for accident reconstructionists, forensic engineers, and all interested in understanding why and how motorcycle crashes occur.
