**Oxford Textbook of Global Health of Women, Newborns, Children, and Adolescents Mar 26 2022** Maternal and child morbidity and mortality affect women and children all over the world. In low resource settings, it is often the result of an illness which under other circumstances would be preventable and treatable. The disease burden predominately occurs in developing countries, but the dangers facing women and children are global issues. To improve conditions for women and children everywhere, we must address maternal and child health in their own right, and ask how they affect each other. The development of children is traced from pre-natal through to newborns, childhood, and adolescence. Posing child health against maltreatment, injury, and malnutrition, this book asks uncomfortable but necessary questions, and discusses how to influence policy and inspire change. Following women from adolescence to motherhood, it discusses sexual and reproductive health, HIV, injury, pregnancy, mental health, and much more. **Adolescent Substance Abuse** May 04 2020 Substance abuse is, and has always been, an indisputable fact of life. People – especially young people – abuse various legal and illegal substances for any number of reasons: to intensify feelings, to achieve deeper consciousness, to escape reality, to self-medicate. And as substance-abusing teenagers mature, they pose particular challenges to the professionals charged with keeping them clean and sober and helping them maintain recovery into adulthood. *Adolescent Substance Abuse: Evidence-Based Approaches to Prevention and Treatment* offers clear, interdisciplinary guidance that grounds readers in the many contexts – developmental, genetic, social, and familial among them – crucial to creating effective interventions and prevention methods. Its contributors examine current findings regarding popularly used therapies, including psychopharmacology, residential treatment, school- and community-based programs, group homes, and specific forms of individual, family, and group therapy. Accessible to a wide professional audience, this volume: (1) Presents evidence-based support for the treatment decision-making process by identifying interventions that work, might work, and don't work. (2) Identifies individual traits associated with susceptibility to substance abuse and addiction in youth. (3) Provides a biogenetic model of the effects of drugs on the brain (and refines the concept of gateway drugs). (4) Evaluates the effectiveness of prevention programs in school and community settings. (5) Adds historical, spiritual, and legal perspectives on substance use and misuse. (6) Includes the bonus resource, the *Community Prevention Handbook on Adolescent Substance Abuse and Treatment*. This volume is an all-in-one reference for counseling professionals and clinicians working with youth and families as well as program developers in state and local agencies and graduate students in counseling and prevention.

**Disease Control Priorities, Third Edition (Volume 2)** Dec 11 2020 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation

of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

**Opioid Therapy in Infants, Children, and Adolescents Dec 23 2021** Opioid analgesics are among the most effective medications for pain management but are associated with serious and increasing public health problems, including abuse, addiction, and death from overdose. Currently, there is an opioid epidemic in the United States with the rate of prescription opioid-related overdose deaths quadrupling over the last 15 years. Pediatric patients are particularly vulnerable to the devastating consequences of opioid misuse. Adolescents who are prescribed opioids are at a higher risk for abusing illicit drugs later in life. Clinicians managing pediatric pain must account for such issues while still delivering effective analgesia to young patients who suffer from both acute and chronic pain. **Opioid Therapy in Children and Adolescents** is designed to explore the unique aspects of opioid therapy in pediatric patients. An introductory framework provides historical context and describes the epidemiology of the opioid crisis with focus on pediatric implications. Subsequent chapters focus on pediatric opioid pharmacology, safe opioid prescribing practices, and non-opioid alternatives to managing pediatric pain states, including multimodal analgesic strategies, interdisciplinary approaches, and complementary medicine. Mitigation strategies against pediatric opioid diversion and misuse are addressed to help clinicians develop practice changes that protect pediatric patients from opioid-related morbidity and mortality. Clinical case examples are also utilized throughout the text to provide grounding for each chapter and a context within which to examine pertinent issues. This first of its kind book provides a comprehensive approach that will guide clinicians to appropriately and safely prescribe opioid analgesics to pediatric patients suffering from pain. It is an invaluable resource for pediatricians, family practitioners, anesthesiologists, pediatric oncologists, and other clinicians who manage pediatric pain.

*Breaking the Adolescent Parent Cycle* Jul 06 2020 This book addresses the dilemma created by the discrepancy between our efforts to prevent adolescent pregnancy and our support of adolescent parenthood, which the author argues is America's greatest unrecognized public health crisis. It is the most preventable cause of crime and welfare dependency, and because we hold no expectations for parents who conceive and give birth to children, rates of child neglect and abuse in the United States far exceed those of other developed nations. Westman explores the circumstances and values that make motherhood seem to be girls' best option and that induce males to conceive without the ability to support their children. It proposes a feasible legal procedure as the basis for ensuring that adolescents' babies have competent parents with the resources and environments they need.

**Finding Your Way with Your Baby** Nov 09 2020 **Finding Your Way with Your Baby** explores the emotional experience of the baby in the first year, and that of the mother, father and other significant adults. It does so in a way that is deeply informed by psychoanalytic understandings, infant observation, developmental science and decades of clinical experience. Combining the wisdom of many years' work with the freshness of up-to-date knowledge, Dilys Daws and Alexandra de Rementeria engage with the most difficult emotional experiences that are often glossed over in parenting books – such as pregnancy, through birth into bonding, ambivalence about the baby, depression, and the emotional turmoil so often brought to the surface by being a new parent. Acknowledgement and understanding about this darker side of family life offers a sense of relief that can allow parents to harness the power of knowing, owning and sharing feelings to transform situations and break negative cycles and old ways of relating. With real-life examples, references to current thinking and a calm and simple writing style they also provide new insights into the more commonly covered issues such as weaning, sleeping and crying. **Finding Your Way with Your Baby** is primarily aimed at parents but it will be a helpful resource for all those working with parents and babies including health visitors, midwives, social workers, GPs, paediatricians and childcare workers. It will appeal to parents and professionals who are interested in ideas from psychoanalytic clinical practice and the latest research in developmental psychology and neuroscience.

The first chapter provides a comprehensive overview of how to get started with EMDR after completing basic training. The book continues with chapters that detail the basic skills in using EMDR with children and then transitions to more advanced skills in using EMDR with children with specific diagnosis and presenting issues. They follow with a chapter summarizing the published evidence to date supporting the practice of EMDR with children. Data is then incorporated into a chapter summarizing their research on EMDR with young children in order to provide evidence of therapists' ability to adhere to the EMDR protocol with children, and to document their research findings about training therapists to use EMDR with children. Finally, they conclude the book with goals for the future of EMDR with children while encouraging therapists to consider conducting research in order to compel the practice of EMDR with children into the mainstream of child psychotherapy. It is a major task of the book to inspire therapists to begin thinking about conducting research and how important research is to therapists in order to validate and advance the practice of psychotherapy. In the end, the most significant goal of this book is to provide best practice for children who are in need of expert psychotherapy in order to change the trajectory of their lives. The hope is to provide guidance and support to therapists in order to launch them in their practice of EMDR. This is the art of treating children with EMDR.
