Remote Control Sep 02 2022 Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. While we all use remote controls, we understand little about their history or their impact on our daily lives. Caetlin Benson-Allot looks back on the remote control's material and cultural history to explain how such an innocuous media accessory has changed the way we occupy our houses, interact with our families, and experience the world. From the first wired radio remotes of the 1920s to infrared universal remotes, from the homemade TV controllers to the Apple Remote, remote controls shape our media devices and how we live with them. Object Lessons is published in partnership with an essay series in The Atlantic.

Design Driven Innovation Apr 04 2020 Until now, the literature on innovation has focused either on radical innovation pushed by technology or incremental innovation pulled by the market. In *Design-Driven Innovation: How to Compete by Radically Innovating the Meaning of Products*, Roberto Verganti introduces a third strategy, a radical shift in perspective that introduces a bold new way of competing. Design-driven innovations do not come from the market; they create new markets. They don't push new technologies; they push new meanings. It's about having a vision, and taking that vision to your customers. Think of game-changers like Nintendo's Wii or Apple's iPod. They overturned our understanding of what a video game means and how we listen to music. Customers had not asked for these new meanings, but once they experienced them, it was love at first sight. But where does the vision come from? With fascinating examples from leading European and American companies, Verganti shows that for truly breakthrough products and services, we must look beyond customers and users to those he calls "interpreters" - the experts who deeply understand and shape the markets they work in. *Design-Driven Innovation* offers a provocative new view of innovation thinking and practice.

Flexible Firm Aug 01 2022 Bang & Olufsen, the famous Danish producer of high-end home electronics, is well known as an early exponent of value-based management: the idea that there should be consistency in what the organisation does, a certain continuity between what the company develops and sells, and the beliefs and practices of the employees. This study investigates how company values are communicated and the collective identity is articulated through the use of such concepts as 'culture', 'fundamental values', and 'corporate religion', as well as how employees negotiate these ideas in their daily working lives. As this book reveals, the identification of values, meant to create cohesion and solidarity among employees, came to symbolise and engender a split between the staff and the other parts of the company. By examining the rise and fall of the value-based management approach, this volume offers the indispensable insight of anthropological enquiry to expose how social realities challenge conventional management strategies and therefore must be considered in the development of new management techniques.

Minimalism May 30 2022 The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human-computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques. Divided into four parts this book traces the development of minimalism, defines the four types of minimalism in interaction design, looks at how to apply it and finishes with some conclusions.

Environmental Assessment of Products Feb 24 2022 The aim of this book is to support industry in their effort to design environmentally friendly products. The book comprises a method and a manual for life cycle assessment of products and it includes examples of how industrial companies have used the method successfully in the design of more environmentally friendly products. The method has been developed over a period of four years under the Danish EDIP programme (Environmental Design of Industrial Products) by a team representing the Technical University of Denmark, five Danish industrial companies, the Confederation of Danish

Industries and the Danish Environmental Protection Agency. The method is coherent and operational and it is well documented by a large variety of examples including five different complex electromechanical products. It guides the user through the inventory and assessment of environmental impacts of products and shows how various products and design solutions during product development can be compared. The method is supported by a base of data for the assessments of environmental impacts and is thus designed as a tool which will make it possible for the user to start on life cycle assessment at once. The book also guides the user through the identification of environmental improvement potentials in the product and the setting of environmental specifications within the general concept of overall commercial optimization. The partnership between industry, authorities and university has been highly fruitful.
