IBM DB2 Recovery Expert for Multiplatforms V2 Usage Guide Jun 26 2019 IBM DB2 Recovery Expert for Multiplatforms provides an enhanced data recovery solution that enables more precise recovery operations while reducing disruption during the recovery process. DB2 Recovery Expert creates and maintains additional recovery assets that you can use for intelligent analysis of both DB2 and DB2 Recovery Expert assets to find the most efficient recovery path. DB2 Recovery Expert facilitates the process of rebuilding your database assets, such as tables, indexes, and data, to a specified point-in-time, often without taking the database or the business operations offline. This IBM Redbooks publication shows you how to install and implement DB Recovery Expert and the Fast Backup and Grouper components. It also describes the DB2 Recovery Expert assets and how to manage these assets. In addition, this book explains the summary and detail reports of Log Analysis, including the DPF environment. It shows, in detailed examples, point-in-time recovery and cloning of tables, table spaces, and databases. Please note that the additional material referenced in the text is not available from IBM.

Tsunami Warning and Preparedness Jul 20 2021 Many coastal areas of the United States are at risk for tsunamis. After the catastrophic 2004 tsunami in the Indian Ocean, legislation was passed to expand U.S. tsunami warning capabilities. Since then, the nation has made progress in several related areas on both the federal and state levels. At the federal level, NOAA has improved the ability to detect and forecast tsunamis by expanding the sensor network. Other federal and state activities to increase tsunami safety include:

improvements to tsunami hazard and evacuation maps for many coastal communities; vulnerability assessments of some coastal populations in several states; and new efforts to increase public awareness of the hazard and how to respond. Tsunami Warning and Preparedness explores the advances made in tsunami detection and preparedness, and identifies the challenges that still remain. The book describes areas of research and development that would improve tsunami education, preparation, and detection, especially with tsunamis that arrive less than an hour after the triggering event. It asserts that seamless coordination between the two Tsunami Warning Centers and clear communications to local officials and the public could create a timely and effective response to coastal communities facing a pending tsuanami. According to Tsunami Warning and Preparedness, minimizing future losses to the nation from tsunamis requires persistent progress across the broad spectrum of efforts including: risk assessment, public education, government coordination, detection and forecasting, and warning-center operations. The book also suggests designing effective interagency exercises, using professional emergency-management standards to prepare communities, and prioritizing funding based on tsunami risk.

Investor Engagement Feb 24 2022 The growth of shareholder value has been a major change in Western economies since the 1980s. This growth has reignited debates concerning relations between investors and managers. This book argues that investors are more than passive providers of finance, on whose behalf managers seek to maximize shareholder returns. Instead, many investors directly influence management practice, through investor engagement. The book examines the role of institutional investors and private equity firms, two types of investors with overlapping but different reasons for engagement. Questions addressed include: What are the incentives, and disincentives, for investment engagement? How is investor engagement organized? What areas of management practice are of particular concern to investors? The discussion shows in detail how private equity firms play a major role in developing new companies, beyond the provision of finance, especially in the IT, biotechnology, and pharmaceutical sectors. The discussion is primarily based on British and US research. The debate has wider international relevance, because there are strong pressures for establishing shareholder value as the international 'norm' for systems of corporate governance. Following a detailed discussion of Germany, the authors conclude that there is no inevitable trend to shareholder value: shareholder value depends upon complementary institutional arrangements in national business systems, which are far from universal. The book concludes with a critical analysis of the

justifications for shareholder value and investor engagement, highlighting the weaknesses of both efficiency and equity justifications.

[Neanderthal Lifeways, Subsistence and Technology](#) Jul 28 2019 The 150th anniversary of the discovery of the famous Neanderthal fossils gave reason for an international and interdisciplinary symposium in Bonn/Germany. The present book arose from this congress and focuses on multiple aspects of archaeological investigation on Neanderthal lifeways. In-depth studies of top-ranking scientists provide a detailed and comprehensive survey of contemporary research on our Pleistocene relatives. Examinations and debates are embedded in a variety of regions and time frames. Chronology, subsistence, land use, and cultural adaptations among late Neanderthals form the major trajectories of the book. The wide range of approaches involved, leads to an increasing understanding of the facets of and the variability of Neanderthal behavioural patterns. The present volume is complemented by a paleontologically orientated publication of the same congress (edited by Gerd-Christian Weniger and Silvana Condemi).

[Global Re-introduction Perspectives](#) Dec 13 2020 "This is the second issue in the Global Re-introduction Perspectives series and has been produced in the same standardized format as the previous one. The case-studies are arranged in the following order: Introduction, Goals, Success Indicators, Project Summary, Major Difficulties Faced, Major Lessons Learned, Success of Project with reasons for success or failure. For this second issue we received a total of 72 case-studies compared to 62 in the last issue. These case studies cover the following taxa as follows: invertebrates (9), fish (6), amphibians (5), reptiles (7), birds (13), mammals (20) and plants (12) ... We hope the information presented in this book will provide a broad global perspective on challenges facing re-introduction projects trying to restore biodiversity"--Pritpal S. Soorae.

[The Tragedy of the Commodity](#) May 18 2021 Winner of the 2017 Paul Sweezy Marxist Sociology Book Award from the American Sociological Association Although humans have long depended on oceans and aquatic ecosystems for sustenance and trade, only recently has human influence on these resources dramatically increased, transforming and undermining oceanic environments throughout the world. Marine ecosystems are in a crisis that is global in scope, rapid in pace, and colossal in scale. In *The Tragedy of the Commodity*, sociologists Stefano B. Longo, Rebecca Clausen, and Brett Clark explore the role human influence plays in this crisis, highlighting the social and economic forces that are at the heart of this looming ecological problem. In a critique of the classic theory "the tragedy of the commons" by ecologist Garrett Hardin, the authors move beyond simplistic explanations—such as unrestrained self-interest or population growth—to argue that it is the commodification of aquatic resources that leads to the depletion of fisheries and the development of environmentally suspect means of aquaculture. To illustrate this argument, the book features two fascinating case studies—the thousand-year history of the bluefin tuna fishery in the Mediterranean and the massive Pacific salmon fishery. Longo, Clausen, and Clark describe how new fishing technologies, transformations in ships and storage capacities, and the expansion of seafood markets combined to alter radically and permanently these crucial ecosystems. In doing so, the authors underscore how the particular organization of social production contributes to ecological degradation and an increase in the pressures placed upon the ocean. The authors highlight the historical, political, economic, and cultural forces that shape how we interact with the larger biophysical world. A path-breaking analysis of overfishing, *The Tragedy of the Commodity* yields insight into issues such as deforestation, biodiversity loss, pollution, and climate change.

Today Valentine's Day is celebrated in many countries around the world, mostly in the West, although it remains a

working day in all of them. The original "St. Valentine" was just a liturgical celebration of one or more early Christian saint named Valentinus. All the modern romantic connotations were added several centuries later by poets.You can use this Blank Lined Journals (110 Pages - 6 x 9 Inch) to jot down your thoughts or class notes, write your work at home, or present it as a gift to someone you love.

[Marine Biotoxins](#) May 06 2020 This paper provides an extensive review of different aspects of five shellfish-poisoning syndromes (paralytic, diarrhoeic, amnesic, neurologic and azapiracid), as well as one fish-poisoning syndrome (ciguatera fish poisoning), and discusses in detail the causative toxins produced by marine organisms, chemical structures and analytical methods of the toxins, habitat and occurrence of the toxin-producing organisms, case studies and existing regulations. Based on this analysis, risk assessments are carried out for each of the toxins, and recommendations are elaborated to improve the management of these risks in order to reduce the harmful effect of these toxins on public health.

[Active Tectonics and Seismic Potential of Alaska](#) Jan 14 2021 Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 179. This multidisciplinary monograph provides the first modern integrative summary focused on the most spectacular active tectonic systems in North America. Encompassing seismology, tectonics, geology, and geodesy, it includes papers that summarize the state of knowledge, including background material for those unfamiliar with the region; address global hypotheses using data from Alaska; and test important global hypotheses using data from this region. It is organized around four major themes: subduction and great earthquakes at the Aleutian Arc, the transition from strike slip to accretion and subduction of the Yakutat microplate, the Denali fault and related structures and their role in accommodating permanent deformation of the overriding plate, and regional integration and large-scale models and the use of data from Alaska to address important global questions and hypotheses. The book's publication near the beginning of the National Science Foundation's EarthScope project makes it especially timely because Alaska is perhaps the least understood area within the EarthScope footprint, and interest in the region can be expected to rise with time as more EarthScope data become available.

[Ships and maritime landscapes](#) Aug 21 2021 This volume gathers 88 contributions related to the theme 'Ships and Maritime Landscapes' of the Thirteenth International Symposium on Boat and Ship Archaeology (ISBSA 13) held in Amsterdam on the 7th to 12th October 2012. The articles include both papers and poster presentations by experts in the field of nautical archaeology, history of ships and shipbuilding, and naval architecture. The contributions deal not only with the theme of maritime landscapes but also with a variety of ship related subjects, like regional watercraft, construction and typology, material applications and design, outfitting, reconstruction and current research.

[American Sniper](#) Sep 21 2021 The #1 New York Times bestselling memoir of U.S. Navy Seal Chris Kyle, and the source for Clint Eastwood's blockbuster, Academy-Award nominated movie. "An amazingly detailed account of fighting in Iraq--a humanizing, brave story that's extremely readable." — PATRICIA CORNWELL, New York Times Book Review "Jaw-dropping...Undeniably riveting." —RICHARD ROEPER, Chicago Sun-Times From 1999 to 2009, U.S. Navy SEAL Chris Kyle recorded the most career sniper kills in United States military history. His fellow American warriors, whom he protected with deadly precision from rooftops and stealth positions during the Iraq War, called him "The Legend"; meanwhile, the enemy feared him so much they named him al-Shaitan ("the devil") and placed a bounty on his head. Kyle, who was tragically killed in 2013, writes honestly about the pain of war—including the deaths of two close SEAL teammates—and in moving first-person passages throughout, his wife, Taya, speaks openly about the strains of war on their family, as well as on Chris. Gripping and unforgettable, Kyle's masterful account of his extraordinary battlefield experiences ranks as one of the great war memoirs of all time.

[Working on the Edge](#) Nov 23 2021 No profession pits man against nature more brutally than king crab fishing in the frigid, unpredictable waters of the Bering Sea. The yearly death toll is staggering (forty-two men in 1988 alone); the conditions are beyond most imaginations (90-mph Arctic winds, 25-foot seas, and super-human stretches of on-deck labor); but the payback, if one survives can be tens of thousands of dollars for a month-long season. In a breathtaking, action-packed account that combines his personal story with the stories of survivors of the industry's most harrowing disasters, Spike Walker re-creates the boom years of Alaskan crab fishing--a modern-day gold rush that drew hundreds of fortune-and adventure-hunters

to Alaska's dangerous waters--and the crash that followed.

Coraline Mar 04 2020 The bewitching tenth-anniversary edition of the classic children's novel Coraline by Neil Gaiman, featuring spellbinding illustrations from Chris Riddell and an exclusive new introduction by the author 'I was enthralled' - Philip Pullman There is something strange about Coraline's new home. It's not the mist, or the cat that always seems to be watching her, nor the signs of danger that Miss Spink and Miss Forcible, her new neighbours, read in the tea leaves. It's the other house - the one behind the old door in the drawing room. Another mother and father with black-button eyes and papery skin are waiting for Coraline to join them there. And they want her to stay with them. For ever. She knows that if she ventures through that door, she may never come back. This deliciously creepy, gripping novel is packed with glorious illustrations by Chris Riddell, and is guaranteed to delight and entrance readers of all ages.

Marine Anthropogenic Litter Jan 26 2022 This book describes how man-made litter, primarily plastic, has spread into the remotest parts of the oceans and covers all aspects of this pollution problem from the impacts on wildlife and human health to socio-economic and political issues. Marine litter is a prime threat to marine wildlife, habitats and food webs worldwide. The book illustrates how advanced technologies from deep-sea research, microbiology and mathematic modelling as well as classic beach litter counts by volunteers contributed to the broad awareness of marine litter as a problem of global significance. The

authors summarise more than five decades of marine litter research, which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats. In 16 chapters, authors from all over the world have created a universal view on the diverse field of marine litter pollution, the biological impacts, dedicated research activities, and the various national and international legislative efforts to combat this environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists, and it provides a solid knowledge base for policy makers, NGOs, and the broader public.
