Universal Service Oct 24 2021 Universal service is a focal point of telecommunications policy in the 1990s, not only in the United States, but in every other country that has begun to liberalize or deregulate its telecommunications industry. The new policy dialogue revolves around four questions. First, how much do the universal service obligations of incumbent telephone companies cost? Second, how can those costs be financed in a competitive environment? Third, what kind of technical and pricing arrangements should be made to interconnect incumbent telephone companies with the new, competing networks? Finally, should the service bundle designated as "universal service" be redefined to take into account new technologies, and if so, how? In the United States, debate over those issues reached a milestone when the U.S. Congress passed the Telecommunications Act of 1996. The new law is the first comprehensive revision of the Communications Act of 1934 and culminates twenty years of legislative struggle over how to adapt federal law to the new realities of telecommunications. In effect, the new law codifies the perceived wisdom about interconnection, competition, and universal service in telecommunications. Because one of the chief purposes of Milton Mueller's analysis is to mount a historically grounded challenge to that orthodoxy, the new law provides the perfect foil for a critique that links the historical and contemporary policy debates over universal service.

Making Universal Service Policy Oct 12 2020 This book is the outgrowth of shared interests between the editors and the contributing authors to provide a multidisciplinary perspective in evaluating universal service policy and recommending policy changes to accommodate a more competitive telecommunications environment. The book is interdisciplinary in nature to reflect the extremely complex context in which universal service policy is formed. The chapter authors represent a broad cross-section of disciplinary training, professional positions, and relationships in the telecommunications industry. Academic disciplines represented include law, economics, anthropology, communication, and business. This book's purpose is to significantly enhance the development of effective telecommunications universal service policy among policymakers, industry members, and stakeholders in the United States. Universal service policy has been, and will continue to be, both enabled and constrained by the simultaneous interaction of social, political, technological, and economic forces in the environment in which it is formed. A more effective process for policy design is to seek agreement on how entitlements embedded in universal service policy should be modified as circumstances invariably change over time. Therefore, the volume reflects recent significant developments in U.S. universal service policy--the implementation of which continues to unfold.

Paradoxes of Digital Disengagement May 19 2021 Life is increasingly governed and mediated through digital and smart technologies, platforms, big data and algorithms. However, the reasons, practices and impact of how the digital is used by different institutions are often deeply linked to social oppression and injustice. Similarly, the ability to resist these digital impositions is based on inequality and privilege. Challenging the ways in which we are increasingly dependent on the digital, this book raises a set of provocative and urgent questions: in a world of compulsory digitality is there an opt out button? Where, when, how, why and to whom is it available? Answering these questions has become even more relevant since the COVID-19 pandemic. In response, the book puts forward the concept of 'digital disengagement' which is explored across six key areas of digitisation: health; citizenship; education; consumer culture; labour; and the environment. Part I examines the difficulty of opting out of compulsory digitality in a world where most things are digital by default. From health apps, algorithmic decision-making to learning analytics, opting out comes with a set of troubling consequences. Part II turns to several examples of disconnection and disengagement. The chapters reveal how phenomena like digital detoxes, time-management apps and online 'green' spaces are co-opted by the very digital systems one is trying to resist. The book critiques issues relating to digital surveillance, algorithmic discrimination and biased tech, corporatisation and monetisation of data, exploitative digital labour, digitalised self-discipline and destruction of the environment. As an interdisciplinary piece of work, the book will be useful to any scholar and activist in Digital, Internet and Social Media Studies; Digital Sociology and Social Policy; Digital Health; Media, Popular and Communication Studies; Consumer culture; and Environment Studies.
