Remittance Markets in Africa Jul 01 2020 Remittances sent by African migrants have become an important source of external finance for countries in the Sub-Saharan African region. In many African countries, these flows are larger than foreign direct investment and portfolio debt and equity flows. In some cases, they are similar in size to official aid from multilateral and bilateral donors. Remittance markets in Africa, however, remain less developed than other regions. The share of informal or unrecorded remittances is among the highest for Sub-Saharan African countries. Remittance costs tend to be significantly higher in Africa both for sending remittances from outside the region and for within-Africa (South-South) remittance corridors. At the same time, the remittance landscape in Africa is rapidly changing with the introduction of new remittance technologies, in particular mobile money transfers and branchless banking. This book presents findings of surveys of remittance service providers conducted in eight Sub-Saharan African countries and in three key destination countries. It looks at issues relating to costs, competition, innovation and regulation, and discusses policy options for leveraging remittances for development in Africa.

Sustainable Value Management—New Concepts and Contemporary Trends Dec 18 2021 Sustainable value management reveals a new space for studying business models. The traditional approach is based on the assumption that the goal of any business is to make money. All decisions regarding supply and production should be made to maximize profit. The discrepancy in creating non-economic value is sometimes the result of separating ownership from control over an enterprise. Although shareholders are interested in maximizing profit, management that actually makes decisions can also pursue other goals. In addition to economic aspects, the management intentions of modern managers are also influenced by factors arising from the organizational culture built, co-created within the organization and sometimes with the participation of external actors such as suppliers and customers. The sources of the creation of social values will be the management intentions of top management, often initiated by the adopted values and rules on the basis of which resources are bound within the structure of the business model. The value of sustainability is based on the identification of those creative sources that relate to economic and social value. Economic value is created through social value and vice versa. This allows the complementarity of the value created to be mutually supportive. The business model that integrates both of these values should be more resistant to crises than the one that is oriented only toward producing economic value. Concurrent implementation of economic and social goals increases resilience and affects the success of modern business models. This is due to the specificity of the business ecosystem that is built as part of the business model, which, in essence, is based on the use of social factors to merge the business model into a complex ecosystem capable of producing value.

Rising to the Challenge Oct 04 2020 America's position as the source of much of the world's global innovation has been the foundation of its economic vitality and military power in the post-war. No longer is U.S. pre-eminence assured as a place to turn laboratory discoveries into new commercial products, companies, industries, and high-paying jobs. As the pillars of the U.S. innovation system erode through wavering financial and policy support, the rest of the world is racing to improve its capacity to generate new technologies and products, attract and grow existing industries, and build positions in the high technology industries of tomorrow. *Rising to the Challenge: U.S. Innovation Policy for Global Economy* emphasizes the importance of sustaining global leadership in the commercialization of innovation which is vital to America's security, its role as a world power, and the welfare of its people. The second decade of the 21st century is witnessing the rise of a global competition that is based on innovative advantage. To this end, both advanced as well as emerging nations are developing and pursuing policies and programs that are in many cases less constrained by ideological limitations on the role of government and the concept of free market economics. The rapid transformation of the global innovation landscape presents tremendous challenges as well as important opportunities for the United States. This report argues that far more vigorous attention be paid to capturing the outputs of innovation - the commercial products, the industries, and particularly high-quality jobs to restore full employment. America's economic and national security future depends on our succeeding in this endeavor.

Cross-Cultural Marketing May 11 2021 Cross-cultural marketing is an important element of the contemporary business environment. Many conventional accounts of the topic have conflated cross-cultural and cross-national marketing, but in this groundbreaking, new book, Burton argues that these generalizations have little meaning given the extent of multiculturalism in many societies. Given the importance of new emerging markets in the Far East, Middle East, Asia and Latin America, this book raises important questions about the applicability of existing marketing theory and practice, which was originally developed using the model of Western society. An extensive range of cross-cultural marketing issues is addressed, including: Cross-cultural consumer behaviour Cross-cultural management practice Promotional strategies Product development Distribution Marketing research methods Cross-cultural Marketing offers a new, more complex and sophisticated approach to the important challenges for existing marketing theory and practice and their continued relevance for stakeholders. As such, it is an invaluable text for students of international and cross-cultural marketing, as well as for practitioners who wish to assess new developments in the field.
