He shows how to keep plays dramatically compelling and offers ways to avoid common mistakes that make them dull, confusing, or ineffective. He then distills the essence of traditional revision into key questions and discusses frequently overlooked tools, terms, and strategies that go beyond established methods of evaluation.

Build an A-Team Jun 12 2021 Lead each person on your team up the learning curve. What's the secret to having an engaged and productive team? It's having a plan for developing all employees--no matter where they are on their personal learning curves. Better morale and higher performance happen through learning, argues Whitney Johnson. In over twenty years of coaching, investing, and consulting, Johnson has seen that employees need continuous learning and fresh challenges to stay motivated. The best bosses know this, and they know how to make it happen by thoughtfully designing people's jobs around the skills they have today as well as the skills they'll need to be even more valuable

tomorrow. That's how entire organizations stay competitive in an unpredictable, rapidly changing business environment. In this book, Johnson explains how to become one of those bosses and how to build your A-team by: Identifying what your employees already know and what they need to learn Designing their jobs to maximize engagement and learning Applying a seven-step process for leading each person up their learning curve We all want opportunities to learn, experiment, and grow in our jobs. When our bosses work with us to help us leap to new challenges, the result is a team that knows how to thrive, no matter what the future holds.

The Interpersonal Neurobiology of Play: Brain-Building

Interventions for Emotional Well-Being Mar 10 2021 Nurturing brain development in children through play. The mental health field has seen a significant shift in the past decade toward including a neuroscience perspective when designing clinical interventions. However, for many play therapists it has been challenging to apply this information in the context of play therapy. Here, Theresa Kestly teaches therapists how to understand the neurobiology of play experiences so the undeniable benefits of play therapy can be exploited to their fullest. At last, clinical readers have a book that takes seriously the importance of play and brings a scientific eye to this most important aspect of life. Drawing on concepts of interpersonal neurobiology, the benefits of play interventions to achieve attunement, neural integration, healthy attachment, and the development of resilience and well-being become clear. The book is organized into three parts. The first part lays a conceptual foundation for considering play in relation to the neurobiology of the developing brain and mind. The next part explores specific topics about play including the therapeutic playroom, the collaborative relationship between therapist and clients, storytelling, and mindfulness. The last part of the book asks questions about the state of play in our families, clinics, and schools. How did we get to a place where play has been so devalued, and what can we do about it? Now that we know how important play is across the lifespan from a scientific standpoint, what can we do to fully integrate it into our lives? After reading this book, clinicians, teachers, and even parents will understand why play helps children (and adults) heal from painful experiences, while developing self-regulation and empathy. The clinical examples in the book show just how powerful the mind is in its natural push toward wholeness and integration.

Understanding Young Children's Learning through Play Jul 26 2022 This timely and accessible text introduces, theorises and practically applies two important concepts which now underpin early years practice: those of 'playful learning' and 'playful pedagogies'. Pat Broadhead and Andy Burt draw upon filmed material, conversations with children, reflection, observation, and parental and staff interviews, in their longitudinal study of outdoor and indoor play environments in an early years unit. This research-based text offers extensive insights into related theories, as well drawing on the authors' skills and knowledge as researcher and as class teacher in order to provide opportunities for personal reflection and possibilities for practical application in early years classes and settings. Discussing both indoor and outdoor environments, the text explores ideas surrounding 'open-ended play', and 'the whatever you want it to be place'. It illustrates how the themes of children's play reflect their interests, experiences, knowledge gained at home and in school, and their cultural heritages. By showing how children become familiar and skilful within open-ended play environments, the authors illustrate how the children's co-operative skills develop over time as they become connected in communities of learners. Alongside the examples of children's playful learning, the book also considers the implications for resourcing and organising playful settings through playful pedagogies that connect with the Early Years Foundation Stage curriculum (DfES 2007) and with the Tickell Review, ongoing as the book went to press. *Understanding Young Children's Learning through Play* uses children's perspectives on their play to illustrate how rich their personal understandings are. It also includes parental reflections on what may initially appear a risky and unusual outdoor environment, and it draws attention to the importance of conflict resolution in play in order to extend children's resilience and assertiveness. This insightful text will be of interest to students of early years education, early years practitioners, academics and researchers.

The Boy on the Beach Jul 14 2021 Four-year-old Eli plays alone at the shore, inventing dramas out of sand and water. He is Builder, Fireman, Protector, and Scout, overcoming waves and conquering monsters. Enter Marianne and doll, Mother and Baby, eager to redefine Eli as a good father and homesteader. Their separate visions intertwine in a search for a common ground on which howling wolves and butterfly sisters can learn to understand and need one another. What can the richly imagined, impressively adaptable fantasy world of these children tell us about childhood, development, education, and even life itself? For fifty years, teacher and writer Vivian Gussin Paley has been exploring the imagery, language, and lore of young children, asking the questions they ask of themselves. In *The Boy on the Beach* she continues to do so, going deeper into the mystery of play as she follows Eli and Marianne through the kindergarten year, finding more answers and more questions. How does their teacher, Mrs. Olson, manage to honor and utilize the genius of play to create an all-inclusive community in which boys and girls like each other and listen to each other's stories? Why is Paley's fellow teacher Yu-ching in Taiwan certain that her children pretend to be kittens in order to become necessary to the group? And why do teachers in London see their children's role-playing as the natural end to loneliness in the school community? Rich with the words of children and teachers themselves, *The Boy on the Beach* is vintage Paley, a wise and provocative appreciation of the importance of play and enduring curiosity about the nature of childhood and the imagination.

Building Musical Lives May 12 2021

Dream Play Build Aug 27 2022 The room is dim, the chairs are in perfectly lined rows. The city planner puts up a color-coded diagram of the street improvement project, dreading the inevitable angry responses. Jana loves her community and is glad to be able to attend the evening meeting, and she has a lot of ideas for community change. But she has a hard time hearing, and can't see the diagrams clearly. She leaves early. It's time to imagine a different type of community engagement - one that inspires connection, creativity, and fun. People love their communities and want them to become safer, healthier, more prosperous places. But the standard approach to public meetings somehow makes everyone miserable. Conversations that should be inspiring can become shouting matches. So what would it look like to facilitate truly meaningful discussions between citizens and planners? What if they could be fun? For twenty years, James Rojas and John Kamp have been looking to art, creative expression, and storytelling to shake up the classic community meeting. In *Dream Play Build*, they share their insights into building common ground and inviting active participation among diverse groups. Their approach, "Place It!," draws on three methods: the interactive model-building workshop, the pop-up, and site exploration using our senses. Using our hands to build and create is central to what makes us human, helping spark ideas without relying on words to communicate. Deceptively playful, this method is remarkably effective at teasing out community dreams and desires from hands-on activities. *Dream Play Build* offers wisdom distilled from workshops held around the world, and a deep dive into the transformational approach and results from the South Colton community in southern California. While much of the process was developed through in-person meetings, the book also translates the experience to online engagement--how to make people remember their connections beyond the computer screen. Inspirational and fun, *Dream Play Build* celebrates the value of engaging with the dreams we have for our communities. Readers will find themselves weaving these artful, playful lessons and methods into their own efforts for making change within the landscape around them.

The Science of Play Nov 29 2022 Poor design and wasted funding characterize today's American playgrounds. A range of factors--including a litigious culture, overzealous safety guidelines, and an ethos of risk aversion--have created uniform and unimaginative playgrounds. These spaces fail to nurture the development of children or promote playgrounds as an active component in enlivening community space. Solomon's book demonstrates how to alter the status quo by allying data

with design. Recent information from the behavioral sciences indicates that kids need to take risks; experience failure but also have a chance to succeed and master difficult tasks; learn to plan and solve problems; exercise self-control; and develop friendships. Solomon illustrates how architects and landscape architects (most of whom work in Europe and Japan) have already addressed these needs with strong, successful playground designs. These innovative spaces, many of which are more multifunctional and cost effective than traditional playgrounds, are both sustainable and welcoming. Having become vibrant hubs within their neighborhoods, these play sites are models for anyone designing or commissioning an urban area for children and their families. *The Science of Play*, a clarion call to use playground design to deepen the American commitment to public space, will interest architects, landscape architects, urban policy makers, city managers, local politicians, and parents.
