[Humpty Dumpty In Oakland](#) Mar 24 2022 Set in the San Francisco Bay area in the late 1950s, Humpty Dumpty in Oakland is a tragicomedy of misunderstandings among used car dealers and real-estate salesmen: the small-time, struggling individuals for whom Philip K. Dick always reserved his greatest sympathy. Jim Fergesson, an elderly garage owner with a heart condition, is about to sell up and retire; Al Miller is a somewhat feckless mechanic who sublets part of Jim's lot and finds his livelihood threatened by the decision to sell; Chris Harman is a record company owner who for years has relied on Fergesson to maintain his cars. When Harman hears of Fergesson's impending retirement he tips him off to what he says is a cast-iron business proposition: a development in nearby Marin County with an opening for a garage. Al Miller, though, is convinced that Harman is a crook, out to fleece Fergesson of his life's savings. As much as he resents Fergesson he can't bear to see that happen and - denying to himself all the time what he is doing - he sets out to thwart Harman.

[Advanced Concepts for Renewable Energy Supply of Data Centres](#) Jun 26 2022 The rapid increase of cloud computing, high performance computing (HPC) and the vast growth in

Internet and Social Media use have aroused the interest in energy consumption and the carbon footprint of Data Centres. Data Centres primarily contain electronic equipment used for data processing (servers), data storage (storage equipment), and communications (network equipment). Collectively, this equipment processes, stores, and transmits digital information and is known as information technology (IT) equipment. Advanced Concepts for Renewable Energy Supply of Data Centres introduces a number of technical solutions for the supply of power and cooling energy into Data Centres with enhanced utilisation of renewable energy sources in order to achieve low energy Data Centres. Because of the high energy density nature of these unique infrastructures, it is essential to implement energy efficiency measures and reduce consumption before introducing any renewable energy source. A holistic approach is used with the objective of integrating many technical solutions such as management of the IT (Information Technology) load, efficient electrical supply to the IT systems, Low-Ex air-conditioning systems, interaction with district heating and cooling networks, re-use of heat, free cooling (air, seawater, groundwater), optimal use of heat and cold storage, electrical storage and integration in smart grids. This book is therefore a catalogue of advanced technical concepts that could be integrated into Data Centres portfolio in order to increase the overall efficiency and the share of renewable energies in power and cooling supply. Based on dynamic energy models implemented in TRNSYS some concepts are deeply evaluated through yearly simulations. The results of the simulation are illustrated with Sankey charts, where the energy flows per year within the subsystems of each concept for a selected scenario are shown, and graphs showing the results of parametric analysis. A set of environmental metrics (as the non-renewable primary energy) and financial metrics (CAPEX and OPEX) as well of energy efficiency metrics like the well-known PUE, are described and used to evaluate the different technical concepts.

**Electronic Waves & Transmission Line Circuit Design** Dec 21 2021 The book introduces concepts on a wide range of materials and has several advantages over existing texts, including: 1. The presentation of a series of scientific postulates and laws of RF and microwaves, which lay the foundation for the behavior of waves and their propagation on transmission lines, is unique to this book compared with similar RF and Microwave texts. 2. The presentation of classical laws and principles of electricity and magnetism, all inter-related, conceptually and graphically. 3. There is a shift of emphasis from rigorous mathematical solutions of Maxwell's equations, and instead has been aptly placed on simple yet fundamental concepts that underlie these equations. This shift of emphasis will promote a deeper understanding of the electronics, particularly at RF/Microwave frequencies. 4. Wave propagation in free space and transmission lines has been amply treated from a totally new standpoint. Designing RF/Microwave passive circuits using the Smith Chart as covered in this book becomes a systematic and yet pleasant task, which can easily be duplicated by any practitioner in the field. 5. New technical terms are precisely defined as they are first introduced, thereby keeping the subject matter in focus and preventing misunderstanding, and 6. Finally the abundant use of graphical illustrations and diagrams brings a great deal of clarity and conceptual understanding, enabling difficult concepts to be understood with ease. The fundamentals of RF and microwave electronics can be mastered visually, through many tested practical examples in the book and in the accompanying CD using Microsoft Excel® environment. This book is perfect for RF/microwave newcomers or industry veterans! The material is presented lucidly and effectively through worked practical examples using both clear-cut math and vivid illustrations, which help the reader gain practical knowledge in passive circuit design using the Smith Chart.

**Bioprospecting of Indigenous Bioresources of North-East India** Dec 09 2020 This work is a comprehensive information on the indigenous bioresources of North Eastern India with the scope of bioprospecting for discovery and commercialization of new sources and products and long-term ecological balance. The exploration, conservation and sustainable utilization of bioresources of world's Megabiodiversity Hotspots are undeniable. North Eastern India is a recognised biodiversity hot spot where the evolutionary forces are at its optimum, making this region as centre of origin for many species. Although little bit exploratory studies have been conducted in this part of the globe but a scientific exploitation of the bioresources is almost lacking. Unscientific exploitation and overexploitation without proper knowledge of the bioresources may lead to imbalanced ecosystem of this mega diversity region. At the same time, very less exploration and exploitation will hamper biodiversity based development. Today, unscientific dramatic changes are underway in this region. Human activities are changing, degrading and destroying the bioresources in an unplanned manner. Scientific bioprospecting of the bioresources will boost the economy while ensuring conservation. This book offers comprehensive information about various levels of bioprospecting of the gene pool of this Indo-Burma Mega Biodiversity Hot Spot, the North East India, which is endowed with huge biodiversity potential for exploration and exploitation for the benefit of humankind. Also, this book highlights the less and merely explored part of the indigenous biodiversity of North East India with explanation towards their better sustainable exploitation for benefit of the people, economy and environment. The novelty of the book lies in expert coverage of the bioresources of this mega-diverse region including plants, microbes, insects etc. with provisions for their sustainable scientific utilization. This book portrays North East India as a melting pot of bioresources which are little explored and also those resources which are still to be explored. The book mainly highlights the bioprospecting approaches for North East Indian bioresources, and thus, it make itself a unique one in filling the knowledge gap that is there regarding the bioprospecting of the biodiversity of this special region on the earth. The book concludes by the ecotourism potential of this region. The target audiences for this book include biodiversity economists who are working on technology and bioresource management issues, and especially on biotechnology and biodiversity, development economists addressing the issues of bioresources in developing countries. These people may be in academia, in government, in non-governmental organizations and in private companies. The other target audiences group is policy scholars in government/public sectors who are interested in issues of biotechnology, IPRs, and biodiversity. In addition, scholars/experts in both development studies and resource management studies form another group of target audiences. Also, the book will be useful for the interaction between developed and developing nations regarding the issues of biodiversity and bioprospecting, as North Eastern India is the hub of Biodiversity.

**The Management of Sickle Cell Disease** Jan 28 2020 This book is B&W copy of the government agency publication. This edition of The Management of Sickle Cell Disease (SCD) is organized into four parts: Diagnosis and Counseling, Health Maintenance, Treatment of Acute and Chronic Complications, and Special Topics. The original intent was to incorporate evidence-based medicine into each chapter, but there was variation among evidence-level scales, and some authors felt recommendations could be made, based on accepted practice, without formal trials in this rare disorder. The best evidence still is represented by randomized, controlled trials (RCTs), but variations exist in their design, conduct, endpoints, and analyses. It should be emphasized that selected people enter a trial, and results should apply in practice specifically to populations with the same characteristics as those in the trial. Randomization is used to reduce imbalances between groups, but unexpected factors sometimes may confound analysis or interpretation. In addition, a trial may last only a short period of time, but long-term clinical implications may exist. Another issue is treatment variation, for example, a new pneumococcal vaccine developed after the trial, which has not been tested formally in a sickle cell population. Earlier trial results may be accepted, based on the assumption that the change is small. In some cases, RCTs cannot be done satisfactorily (e.g., for ethical reasons, an insufficient number of patients, or a lack of objective measures for sickle cell "crises"). Thus the bulk of clinical experience in SCD still remains in the moderately strong and weaker categories of evidence. Not everyone has an efficacious outcome in a clinical trial, and the frequency of adverse events, such as with long-term transfusion programs or hematopoietic transplants, might not be considered. Thus, an assessment of benefit-to-risk ratio should enter into translation of evidence levels into practice recommendations. A final issue is that there may be two alternative approaches that are competitive (e.g., transfusions and hydroxyurea). In this case the pros and cons of each course of treatment should be discussed with the patient.

**Clinical Epidemiology** Feb 08 2021 Now in its Fifth Edition, Clinical Epidemiology: The Essentials is a comprehensive, concise, and clinically oriented introduction to the subject of epidemiology. **Digital Trade in the U. S. and Global Economies** Jul 16 2021 Report of a government investigation to better understand the role of digital trade -- domestic commerce and international trade conducted via the Internet -- in the U.S. and global economies, as well as the effects of barriers and impediments to digital trade that impede U.S. access to global markets. The analysis provides findings at three levels: at the firm level, through 10 case studies; at the industry level, through a survey of U.S. businesses; and at the economy-wide level, using computable general equilibrium and econometric models. This analysis shows that digital trade contributes to economic output by improving productivity and reducing trade costs. Digital trade's combined effects of increased productivity and lower trade costs are estimated to have increased U.S. real GDP by \$517.1-\$710.7 billion (3.4-4.8%). Figures and tables. This is a print on demand report.

Organizational Learning Capability Mar 12 2021 Organizational learning matters now more than ever. In today's hypercompetitive business environment, successful executives must be able to discover opportunities, face problems, and pursue innovative ideas, then turn those ideas into action throughout an organization. Based on both empirical research and practice experience, this book gives managers the tools to do just that. Organizational learning capability is the capacity to generate and generalize ideas with impact. Managers generate new ideas in four basic ways: experimentation, in which organizations learn by trying many new products and processes; continuous improvement, in which they learn by constantly improving what they have done before and mastering each step in a process before moving on to other processes; knowledge acquisition, in which they learn by encouraging individuals and teams to acquire new knowledge continuously; and benchmarking, in which they learn by studying how other groups do things and trying to adapt their techniques. Each learning types leads to different performance consequences. Managers must also be able to generalize information through technology, movement of people, incentives, and learning processes. By both generating and generalizing ideas with impact, managers have a blueprint for making learning happen. Learning may not be sustained, however, unless it is congruent with the larger business context--the organization's strategy and culture and the industry's characteristics. Unfortunately, just as organizations develop learning capabilities, they also suffer from certain learning disabilities. This book outlines common disabilities and the means to overcome them. The authors assist practicing managers by providing several examples of successful and unsuccessful organizations and describing the ways in which they have helped organizations improve learning capability in their consulting practices. Based on detailed case studies, a review of past literature, and data gleaned from a worldwide survey of companies, Organizational Learning Capability is an accessible and useful guide for managers competing in the information economy. This book turns abstract ideas into practice, offers tools that managers can use, and presents a simple yet profound road map for making learning a reality.
