Public Financial Management in the European Union Jul 08 2020 This book reveals how to create efficient institutions and coordinate policy on a transnational scale to ensure European Union integration can best meet social needs. It offers a combined technocratic and humanist perspective on the discussion of public financial management. The state, as part of its public policy, should seek to preserve our social and environmental values yet there are mounting imbalances in society which point to the growing role of the state in minimising them. Under such circumstances, it is worth reflecting on how new challenges could require updated, more complex formulas, to deal with crises in current times and for social and economic policymaking by states and the European Union generally, which would ensure their compatibility with the world financial markets. The work offers an in-depth and unique performance analysis of European Union institutions compared to the national entities of EU member states. It contributes to the ongoing debate on global public goods and the processes involved in managing their provision. Further, it discusses public finance management instruments, indicating their historical evolution in practice and their effectiveness measured with the Human Development Index. The author presents a proposal of how to manage global, European and national public goods across three areas: environmental protection, transnational infrastructure projects and social policy. The book analyses public financial management instruments used during the recent pandemic, making a distinction between "regular" and "emergency" instruments and assessing their effectiveness in specific economic situations. This will be of interest to researchers and students of economics and finance, as well as decision makers and practitioners from governments, international organizations and specific non-governmental organizations concerned with issues of public finance management.
