[Origins and Successors of the Compact Disc](#) Sep 15 2021 In March 1979, a prototype of a 'Compact Disc (CD) digital audio system' was publicly presented and demonstrated to an audience of about 300 journalists at Philips in Eindhoven, The Netherlands. This milestone effectively marked the beginning of the digital entertainment era. In the years to follow, the CD-audio system became an astonishing worldwide success, and was followed by successful derivatives such as CD-ROM, CD-RW, DVD, and recently Blu-ray Disc. Today, around the thirtieth anniversary of the milestone, it is taken for granted that media content is stored and distributed digitally, and the analog era seems long gone. This book retraces the origins of the CD system and the subsequent evolution of digital optical storage, with a focus on the contributions of Philips to this field. The book contains perspectives on the history and evolution of optical storage, along with reproductions of key technical contributions of Philips to the field.

[Digital Media Processing](#) Sep 22 2019 Multimedia processing demands efficient programming in order to optimize functionality. Data, image, audio, and video processing, some or all of which are present in all electronic devices today, are complex programming environments. Optimized algorithms (step-by-step directions) are difficult to create but can make all the difference when developing a new application. This book discusses the most current algorithms available that will maximize your programming keeping in mind the memory and real-time constraints of the architecture with which you are working. A wide range of algorithms is covered detailing basic and advanced multimedia implementations, along with cryptography, compression, and data error correction. The general implementation concepts can be integrated into many architectures that you find yourself working with on a specific project. Analog Devices' BlackFin technology is used for examples throughout the book. Discusses how to decrease algorithm development times to streamline your programming Covers all the latest algorithms needed for contrained systems Includes case studies on WiMAX, GPS, and portable media players

Digital Phoenix May 31 2020 How the future of the information economy will take place at the intersection of technology, law, and economics: lessons to be learned from the Microsoft antitrust trial, open-source software, and Napster. While we were waiting for the Internet to make us rich—back when we thought all we had to do was to buy lottery tickets called dotcom shares—we missed the real story of the information economy. That story, says Bruce Abramson in Digital Phoenix, took place at the intersection of technology, law, and economics. It unfolded through Microsoft’s manipulation of software markets, through open source projects like Linux, and through the file-sharing adventures that

Napster enabled. Linux and Napster in particular exploited newly enabled business models to make information sharing cheap and easy; both systems met strong opposition from entrenched interests intent on preserving their own profits. These scenarios set the stage for the future of the information economy, a future in which each new technology will threaten powerful incumbents—who will, in turn, fight to retard this "dangerous new direction" of progress. Disentangling the technological, legal, and economic threads of the story, Abramson argues that the key to the entire information economy—understanding the past and preparing for the future—lies in our approach to intellectual property and idea markets. The critical challenge of the information age, he says, is to motivate the creation and dissemination of ideas. After discussing relevant issues in intellectual property and antitrust law, the economics of competition, and artificial intelligence and software engineering, Abramson tells the information economy's formative histories: the Microsoft antitrust trial, the open-source movement, and (in a chapter called "The Computer Ate My Industry") the advent of digital music. Finally, he looks toward the future, examining some ways that intellectual property reform could power economic growth and showing how the information economy will reshape the ways we think about business, employment, society, and public policy—how the information economy, in fact, can make us all rich, as consumers and producers, if not as investors.

Narrating War and Peace in Africa Aug 26 2022 Narrating War and Peace in Africa interrogates conventional representations of Africa and African culture -- mainly in the twentieth and early twenty-first centuries -- with an emphasis on portrayals of conflict and peace. While Africa has experienced political and social turbulence throughout its history, more recent conflicts seem to reinforce the myth of barbarism across the continent: in Nigeria, Rwanda, Somalia, Sierra Leone, Uganda, Kenya, Mozambique, Chad, South Africa, Zimbabwe, and Sudan. The essays in this volume address reductive and stereotypical assumptions of postcolonial violence as "tribal" in nature, and offer instead various perspectives -- across disciplinary boundaries -- that foster a less fetishized, more contextualized understanding of African war, peace, and memory. Through their geographical, historical, and cultural scope and diversity, the chapters in Narrating War and Peace in Africa aim to challenge negative stereotypes that abound in relation to Africa in general and to its wars and conflicts in particular, encouraging a shift to more balanced and nuanced representations of the continent and its political and social climates. Contributors: Ann Albuyeh, Zermarie Deacon, Alicia C. Decker, Aména Moinfar, Kayode Omoniyi Ogunfolabi, Sabrina Parent, Susan Rasmussen, Michael Sharp, Cheryl Sterling, Hetty ter Haar, Melissa Tully, Pamela Wadende, Metasebia Woldemariam, Jonathan Zilberg. Toyin Falola is the Jacob and Frances Sanger Mossiker Chair in the Humanities and University Distinguished Teaching Professor at the University of Texas at Austin. When Baseball Isn't White, Straight and Male Apr 22 2022 This book analyzes how sportswriters have discussed issues of race, ethnicity, nationality, sexual identity, age and class within professional baseball from 1998 to the present. Each chapter looks at the media representations of a specific controversy--the 1998 home-run chase, Alex Rodriguez's historic contract signing, Barry Bonds' home runs, Mike Piazza's "I am not gay" press conference, Effa Manley's Hall of Fame induction, the celebration of Jackie Robinson's legacy, as well as the various incidents involving performance-enhancing drugs. The author puts it together and reveals what messages are being conveyed by the issues.
