The following topics are investigated: (1) arranging and equipping the classroom; (2) establishing a daily routine; (3) teaching in a team; (4) planning in a team; (5) active learning; (6) language; (7) experiencing and representing (i.e., painting, drawing, modeling); (8) classification; (9) seriation; (10) number; (11) spatial relations; (12) time; and (13) "what next?" (thoughts for future planning). A listing of films and publications related to each topic is presented at the end of every chapter. (BJD)

Space Case Nov 05 2020 It's a murder mystery on the moon in this humorous and suspenseful space adventure from the author of *Belly Up and Spy School* that The New York Times Book Review called "a delightful and brilliantly constructed middle grade thriller." Like his fellow lunarnauts—otherwise known as Moonies—living on Moon Base Alpha, twelve-year-old Dashiell Gibson is famous the world over for being one of the first humans to live on the moon. And he's bored out of his mind. Kids aren't allowed on the lunar surface, meaning they're trapped inside the tiny moon base with next to nothing to occupy their time—and the only other kid Dash's age spends all his time hooked into virtual reality games. Then Moon Base Alpha's top scientist turns up dead. Dash senses there's foul play afoot, but no one believes him. Everyone agrees Dr. Holtz went onto the lunar surface without his helmet properly affixed, simple as that. But Dr. Holtz was on the verge of an important new discovery, Dash finds out, and it's a secret that could change everything for the Moonies—a secret someone just might kill to keep...

The Last Supper on the Moon Study Guide plus Streaming Video Apr 22 2022 This Study Guide includes: Individual access to five streaming video sessions Discussion and reflection questions with video notes Personal study between sessions Leader's Guide In the summer of 1969, Buzz Aldrin had a mission. His goal was to fly 240 million miles from earth and, along with fellow astronaut Neil Armstrong, be the first to walk on the moon. But moments before that historic step, Aldrin poured a specially prepared drink into a cup and partook of a sacred celebration that had first occurred two thousand years before. The lunar Last Supper was full of meaning, just as it had been when Jesus himself took of the elements and acknowledged his calling and purpose. But the significance didn't end there. Today, as we remember the sacrifice of Christ on the cross, followed by his resurrection, we are reminded that what seemed to be an end became the genesis of everything—including the rescue and restoration of anyone who calls on Jesus' name. In this five-session study, bestselling author and pastor Levi Lusko journeys back in time and forward in hope, using the 1969 lunar mission as an analogy of the metamorphosis that was unleashed by the man from Galilee. Along the way, he uncovers the remarkable "seven statements" that Jesus made from the cross—words that provide us everything we need in the chaos of our world to conquer judgment, persecution, anxiety, and pain. Designed for use with The Last Supper on the Moon Video Study (sold separately).

SCM Studyguide: Liturgy, 2nd Edition Nov 25 2019 The SCM Studyguide: Liturgy, 2nd Edition is an introduction to liturgy that considers the basic 'building blocks' needed to grasp the subject area. It outlines the essential shape and content of Christian worship and explores a range of liturgical dynamics of which both students of liturgy and leaders of liturgy need to be aware. This 2nd edition of the popular Studyguide is fully revised, updated and expanded. The book takes account of new developments in scholarship, engages with new contexts for liturgical celebration (notably, fresh expressions as part of a mixed economy of church), encompasses recent revisions in liturgy and seeks to broaden the engagement beyond the British context to consider the wider global context.

Astronomy For Beginners Oct 29 2022 Astronomy is inherently more observational rather than an elemental study of science. All measurements are performed at a greater distance from the object of interest, with no control of quantities such as chemical composition, pressure, or temperature. You will also understand the study of the solar system with relation to the gravitational attraction that holds the planets in their elliptical orbits around the sun. An early study of the universe was done through the naked eyes. This method led to the categorization of the celestial bodies and assigned constellations. Constellation has been a very important navigational tool since the beginning of the world. Various disciplines of Astronomy will also be discussed. Examples of such disciplines include: -Astrophysics-Galactic astronomy-Galaxy Formation-Cosmology-Astrometry-Extragalactic astronomy-Stellar astronomy-Planetary sciences-Astrobiology-Formation of stars
