From Scientific Psychology to the Study of Persons Jan 21 2022 "This is a critical, personalized approach to

reframing the discipline of psychology through a singular narrative in the form of a memoir written by a successful research psychologist. In this book we follow Martin's unique career, which has allowed him to understand and adopt different perspectives and ways of approaching psychology, from working in applied areas like educational and counseling psychology to more specialized areas like theory and history of psychology. His journey through and within the field describes his movement away from scientifically-based psychology, which views teachings and interventions to be primarily underwritten by hard scientific evidence. Martin exposes the flaws in this approach and highlights the importance of focusing on the study of persons in their life contexts over the use of aggregated group results to ensure that the discipline survives and flourishes. This is an impactful and universally applicable book with valuable insights for students and scholars of psychology today, particularly those studying history of psychology, theoretical psychology and philosophical psychology"--

Studies of Work and the Workplace in HCI Jul 15 2021 This book has two purposes. First, to introduce the study of work and the workplace as a method for informing the design of computer systems to be used at work. We primarily focus on the predominant way in which the organization of work has been approached within the field of human-computer interaction (HCI), which is from the perspective of ethnomethodology. We locate studies of work in HCI within its intellectual antecedents, and describe paradigmatic examples and case studies. Second, we hope to provide those who are intending to conduct the type of fieldwork that studies of work and the workplace draw off with suggestions as to how they can go about their own work of developing observations about the

settings they encounter. These suggestions take the form of a set of maxims that we have found useful while conducting the studies we have been involved in. We draw from our own fieldwork notes in order to illustrate these maxims. In addition we also offer some homilies about how to make observations; again, these are ones we have found useful in our own work. Table of Contents: Motivation / Overview: A Paradigmatic Case / Scientific Foundations / Detailed Description / Case Study / How to Conduct Ethnomethodological Studies of Work / Making Observations / Current Status

Tell Someone Oct 30 2022 Understand, this book is not written to make you feel bad or condemn you if you have not engaged others with the gospel message. This book is written to encourage and inspire you. Even though pastor and author Greg Laurie is a “gospel-presenting professional,” in this book he tells stories of his own failure and success. The most important things you will find here are biblical principles that you can apply yourself. Taken from the life and witness of Jesus, and tested over Greg’s forty years of ministry, in both one-on-one experiences and large-scale evangelistic arena and stadium events, these ideas are intended to mobilize every person in the church to “Tell Someone” about Jesus Christ.

Social Consciousness and Career Awareness Feb 07 2021 Contemporary college students' apparent lack of exposure to citizenship, lack of concern for others, and ignorance of how to be involved citizens has prompted a call for involving students in volunteer service at the national level or as part of the undergraduate experience. This monograph begins by discussing volunteer programs as they relate to higher education including the role universities have traditionally played, and the involvement of various branches of the university community. A further section treats the characteristics and desires of contemporary college students: their environmental, economic, social, political and financial conditions; lessons of the student activism of the 1960s; and the effects of civic participation. The next section explores the economic, social, and personal aspects of volunteering and philanthropy. National service programs are the subject of the fourth section, which discusses their essential elements, congressional efforts, President Bush's proposal to create some type of volunteer service corps, and the effect of national service on higher education. The next section examines the role and action of higher education in service programs including: curricular changes; service-learning education; work-study programs; collaborative efforts between higher education, government, and the private sector; outreach opportunity leagues; campus compacts; faculty participation; and evaluating the effects of civic participation. An index and a bibliography of 140 references are included. (JB)

All Things New - Bible Study Book Jan 27 2020 The city of Corinth was like our cities-full of people and full of problems. Studying Those who Study Us Nov 30 2022 Diana E. Forsythe was a leading anthropologist of science, technology, and work, and especially of the field of artificial intelligence. This volume collects her best-known essays, along with other major works that remained unpublished upon her death in 1997. The essays proceed as a series of developing variations on the key questions that still confront science and technology studies today. What assumptions do expert systems designers make about users, and about knowledge more broadly, when they build software? How should humans interact with computers, and how do they, really? Why do computing firms hire anthropologists to study human-computer interaction, and what do anthropologists find once they are hired? And how and why are traditional power asymmetries between men and women produced and maintained in engineering firms and laboratories? The book is not only a significant anthropological study of artificial intelligence and informatics, but is also an exemplar of how reflexive ethnography should be done. Among several pioneering strands of thought, it investigates the roles of gender and power in computer engineering, looking at the cultural mechanisms that support the persistent male domination of engineering, and analyzing the laboratory as a fictive kin group that reproduces gender asymmetries.
