Distributed Autonomous Robotic Systems 2 May 01 2020 Great interest is now focused on distributed autonomous robotic systems (DARS) as a new strategy for the realization of flexible, robust, and intelligent robots. Inspired by autonomous, decentralized, and self-organizing biological systems, the field of DARS encompasses broad interdisciplinary technologies related not only to robotics and computer engineering but also to biology and psychology. The rapidly growing interest in this new area of research was manifest in the first volume of *Distributed Autonomous Robotic Systems*, published in 1994. This second volume in the series presents the most recent work by eminent researchers and includes such topics as multirobot control, distributed robotic systems design, self-organizing systems, and sensing and navigation for cooperative robots. *Distributed Autonomous Robotic Systems 2* is a valuable source for those whose work involves robotics and will be of great interest to those in the fields of artificial intelligence, self-organizing systems, artificial life, and computer science.

Motivating Primary-grade Students Apr 11 2021 What is that intangible force that makes some classrooms positively buzz with interest, attention, and excitement about learning? While motivation can't easily be quantified, few would dispute its essential role in promoting academic engagement and achievement. This uniquely practical book is the first how-to guide on motivating students in grades K-3. Presented are research-based strategies and techniques that are brought to life in three extended case studies of highly successful motivators. Vividly demonstrating how these exemplary teachers flood their classrooms with motivation, the book provides inspiration and practical ideas that readers can implement in their own work. It also guides teachers in recognizing and avoiding key pitfalls--the attitudes, instructional methods, and classroom management approaches that may inadvertantly undermine student motivation. Key Features: The first how-to book on this important topic Senior author Michael Pressley is a popular, visible figure with a stellar reputation. Practical, realistic classroom suggestions are illustrated by case material. Appendix provides checklists of what works (and what doesn't) in promoting academic motivation.

Information Ecology Jan 01 2023 According to virtually every business writer, we are in the midst of a new "information age," one that will revolutionize how workers work, how companies compete, perhaps even how thinkers think. And it is certainly true that Information Technology has become a giant industry. In America, more than 50% of all capital spending goes into IT, accounting for more than a third of the growth of the entire American economy in the last four years. Over the last decade, IT spending in the U.S. is estimated at 3 trillion dollars. And yet, by almost all accounts, IT hasn't worked all that well. Why is it that so many of the companies that have invested in these costly new technologies never saw the returns they had hoped for? And why do workers, even CEOs, find it so hard to adjust to new IT systems? In *Information Ecology*, Thomas Davenport proposes a revolutionary new way to look at information management, one that takes into account the total information environment within an organization. Arguing that the information that comes from computer systems may be considerably less valuable to managers than information that flows in from a variety of other sources, the author describes an approach that encompasses the company's entire information environment, the management of which he calls information ecology. Only when organizations are able to combine and integrate these diverse sources of information, and to take them to a higher level where information becomes knowledge, will they realize the full power of their information ecology. Thus, the author puts people, not technology, at the center of the information world. Information and knowledge are human creations, he points out, and we will never excel at managing them until we give people a primary role. Citing examples drawn from his own extensive research and consulting including such major firms as A.T. & T., American Express, Ford, General Electric, Hallmark, Hoffman La Roche, IBM, Polaroid, Pacific Bell, and Toshiba Davenport illuminates the critical components of information ecology, and at every step along the way, he provides a quick assessment survey for managers to see how their organization measures up. He discusses the importance of developing an overall strategy for information use; explores the infighting, jealousy over resources, and political battles that can frustrate information sharing; underscores the importance of looking at how people really use information (how they search for it, modify it, share it, hoard it, and even ignore it) and the kinds of information they want; describes the ideal information staff, who not only store and retrieve information, but also prune,

provide context, enhance style, and choose the right presentation medium (in an age of work overload, vital information must be presented compellingly so the appropriate people recognize and use it); examines how information management should be done on a day to day basis; and presents several alternatives to the machine engineering approach to structuring and modeling information. Davenport makes explicit what many managers already know in their gut: that useful information flow depends on people, not equipment. In *Information Ecology* he paves the way for all managers to build a more competitive, creative, practical information environment for their companies.

Urban Wildlife Management Sep 04 2020 A CHOICE Outstanding Academic Title While much has been written about the factors that either promote or prevent proliferation of wildlife in urban settings, forward-thinking professors instructing in this area have had to rely on their own ability to collect information from the published literature. Even then, it has been a challenge to find research that examines the entire picture of human-wildlife interaction, beyond those that focus on problems associated with nuisance urban wildlife. *Urban Wildlife Management* is the first comprehensive text to examine the issues that have led to the need for human-wildlife interface management strategies. The book focuses not only on ecological matters, but also incorporates the political, economic, and societal issues relevant to the development of proactive management planning. Synthesizing hundreds of journal articles, as well as countless other sources on urban wildlife management, the book organizes a wealth of material under five subject areas: urban landscapes, urban ecosystems, urban habitats and hazards, sociopolitical issues, and special management considerations. *Urban Wildlife Management* educates students in the fundamental principles of ecology required to understand how human-made environments lead to the need for urban wildlife management. Exploring the changing landscape of wildlife management, the authors offer students a historical perspective, along with a look at current trends and future directions of wildlife management. They include selected lessons in ecology relevant to understanding the presence or absence of wildlife species in urban communities. These lessons look at the impacts of urbanization on ecosystem structure and function, including waterways, predation, and population dynamics. Urban habitats are discussed in terms of the unique features of green and gray spaces, urban streams, and urban soils. The book also considers both endangered species and overabundant wildlife populations.

Urban Ecology in the Global South Sep 16 2021 Against the background of unprecedented rates of urbanisation in the Global South, leading to massive social, economic and environmental transformations, this book

engages with the dire need to understand the ecology of such settings as the foundation for fostering sustainable and resilient human settlements in contexts that are very different to the Global North. It does so by bringing together scholars from around the world, drawing together research and case studies from across the Global South to illustrate, in an interdisciplinary and comprehensive fashion, the ecology of towns and cities in the Global South. Framed using a social-ecological systems lens, it provides the reader with an in-depth analysis and understanding of the ecological dynamics and ecosystem services and disservices within the complex and rapidly changing towns and cities of the Global South, a region with currently scarce representation in most of the urban ecology literature. As such the book makes a call for greater geographical balance in urban ecology research leading towards a more global understanding and frameworks. The book embraces the complexity of these rapid transformations for ecological and environmental management and how the ecosystems and the benefits they provide shape local ecologies, livelihood opportunities and human wellbeing, and how such knowledge can be mobilised towards improved urban design and management and thus urban sustainability.

Earth Observation of Ecosystem Services Jan 09 2021 A balanced review of differing approaches based on remote sensing tools and methods to assess and monitor biodiversity, carbon and water cycles, and the energy balance of terrestrial ecosystem. Earth Observation of Ecosystem Services highlights the advantages Earth observation technologies offer for quantifying and monitoring multiple ecosystem functions and services. It provides a multidisciplinary reference that expressly covers the use of remote sensing for quantifying and monitoring multiple ecosystem services. Rather than exhaustively cover all possible ecosystem services, this book takes a global look at the most relevant remote sensing approaches to estimate key ecosystem services from satellite data. Structured in four main sections, it covers carbon cycle, biodiversity, water cycle, and energy balance. Each section contains a review of conceptual and empirical methods, techniques, and case studies linking remotely sensed data to the

biophysical variables and ecosystem functions associated with key ecosystem services. The book identifies relevant issues and challenges of assessment, presents cutting-edge sensing techniques, uses globally implemented tools to quantify ecosystem functions, and presents examples of successful monitoring programs. Covering recent developments undertaken on the global and national stage from Earth observation satellite data, it includes valuable lessons and recommendations and novel ways to improve current global monitoring systems. The book delineates the use of Earth observation data so that it can be used to quantify, map, value, and manage the valuable goods and services that ecosystems provide to societies around the world.
