Gastronomy and Urban Space Oct 26 2019 This book focuses on the relationship between gastronomy and urban space. It highlights the intrinsic role of eating establishments and the gastronomy industry for cities by assessing their huge impacts on urban changes and discussing some of the challenges posed by new developments. Written by authors with a background in geography, it starts by discussing theoretical aspects of studies on gastronomy in urban space to place the subject in the broader context of urban geography. Covering both changes and challenges in gastronomy in urban space, it presents a wide range of problems, which are described and analysed using various case studies from Europe and other parts of the world.

Money and Credit Jun 26 2022 We develop a theory of money and credit as competing payment instruments, then put it to work in applications. Buyers can use cash or credit, with the former (latter) subject to the inflation tax (transaction costs). Frictions that make the choice of payment method interesting also imply equilibrium price dispersion. We deliver closed-form solutions for money demand. We then show the model can simultaneously account for the price-change facts, cash-credit shares in micro payment data, and money-interest correlations in macro data. We analyze the effects of inflation on welfare, price dispersion and markups. We also describe nonstationary equilibria as self-fulfilling prophecies, which is standard, except here it entails dynamics in the price distribution.

Endogenous Growth, Market Failures and Economic Policy Jan 10 2021 Endogenous Growth, Market Failures and Economic Policy develops, within a rigorous formal framework, innovative and unconventional macroeconomic policy perspectives that can be deduced from the New Growth Theory in the presence of market imperfections, adopting the standard structure of fiscal, monetary and trade policy for the book. For instance, the introduction of monopolistic competition leads to positive growth effects of fiscal policy as well as protection of infant industries.

General Equilibrium Models of Monetary Economies Aug 29 2022 General Equilibrium Models of Monetary Economies: Studies in the Static Foundations of Monetary Theory is a collection of essays that addresses the integration of the theory of money and the theory of value by using a mathematical general equilibrium theory. The papers discuss monetary theory, microeconomic theory, bilateral trade, transactions costs, intertemporal allocation, and the

value of money. The Arrow-Debreu model of Walrasian general equilibrium theory provides a framework to represent money as a device for facilitating trade among economic agents without the use of money as a medium of exchange and as a store of value. The essays analyze the rationale for using a medium of exchange, for using a store of value, and for holding of idle balances in equilibrium. The essays show that by explicit modeling of the structure and difficulties of trade, a powerful class of models which deny money and finance a role in the economy, has by itself shown to have provided the foundation for the structures of trade. The collection will prove helpful for economists, statistician, mathematicians, students or professors of economics and business.
