Rebuilding Your Life after Stroke Jul 14 2021 The physical effects of a stroke are often the most obvious, and hospitals can offer medication and therapy to help alleviate them. However, the psychological consequences of having a stroke, such as memory problems or depression are often ignored. Includes the voices of stroke survivors and their carers, this book provides learning tools and practical guidance to aid in recovery from the psychological effects of a stroke. With insight from many people who have experienced a stroke, this book focuses on what stroke survivors can do, rather than what they cannot. Using exercises, such as mindfulness techniques, to help move towards an acceptance of the long-term side effects, this book delivers a positive message to help survivors of strokes live a better and happier life.

The Stroke and Aphasia Handbook May 31 2020

[Stroke Recovery Book](#) Jun 12 2021 Penned by a rehabilitation physician who has worked with thousands of stroke patients and families, this reference provides simple answers to the many questions that surround strokes and stroke rehabilitation. Free of technical medical jargon, this resource addresses topics such as the anatomy of a stroke, impairments and complications associated with strokes, and preventing and reducing the risk of them. A gallery of photographs that show and explain the latest methodologies in rehabilitation equipment is also included. [Speech Therapy Aphasia Rehabilitation *Star* Workbook IV](#) Oct 29 2022 Workbook to target activities of daily living. Focusing on cognition, memory, attention, sequencing and problem solving skills. Targets everyday tasks: shopping, budgets, medication management, appointments, dining out, schedules and more.

[Beyond Aphasia](#) Jun 24 2022 This book focuses explicitly on therapeutic techniques developed from a social model approach to disability and learning to live with difference. It describes theories, activities and methods of implementation developed from the work of Connect with people with long term aphasia. "Theoretical discussion runs alongside practical ideas for therapy and evaluation, case studies and commentaries from the authors regarding the method and means of implementation." Synthesises theory and practice in this new area of service delivery. Its non-impairment led focus of the therapies means that it has wide appeal to therapists, health service professionals and volunteers who work with people with chronic disabilities affecting lifestyle and communication.

[Identity Theft](#) Oct 05 2020 In 2010, Debra Meyerson, a Stanford University professor, suffered a severe stroke in which she lost all speech and was paralyzed on her right side. *Identity Theft* centres on Debra's experience: her stroke, her extraordinary efforts to recover, and her journey to redefine herself. She draws on her skills as a social scientist and conversations with dozens of fellow survivors-, family members, friends, colleagues, therapists, and doctors to paint a new picture of the emotional journey through the identity-based challenges born from stroke and other accidents and illnesses that rob people of important capabilities. She shares amazing personal stories and uses them to

illustrate lessons we can all learn from. She addresses these important questions: Who are you after a stroke? How do I define myself in the face of more limited abilities? How do you grieve the loss of you? What is really important to me? Who do you become during your recovery? How do I fit in? This is not a how-to book for recovery, nor will it tell you what you'll experience or how you should deal with the loss of ability, but it's a book full of hope for stroke survivors. It gives them and their support network a broad picture of what might lie ahead. And it explores some critical questions that, in the more prevalent focus on physical recovery, are all too often overlooked in the effort to help people who have lost capabilities from stroke or otherwise.

The New Parkinson's Disease Treatment Book Apr 30 2020 The fundamental guide to the most effective treatments for Parkinson's Disease, from a Mayo Clinic doctor with thirty years of clinical and research experience. In this second edition follow-up to the extremely successful first edition, Dr. Ahlskog draws on thirty years of clinical experience to present the definitive guide to dealing with all aspects of Parkinson's Disease, from treatment options and side effects to the impact of the disease on caregivers and family. Dr. Ahlskog's goal is to educate patients so that they can better team up with their doctors to do battle with the disease, streamlining the decision-making process and

enhancing their treatment. To do this, Dr. Ahlskog offers a gold mine of information, distilled from his years of experience treating people with Parkinson's at the Mayo Clinic. In addition to providing a comprehensive account of Parkinson's medications, this book also examines additional aspects of treatment, such as the role of nutrition, exercise, and physical therapy. Although many commendable texts have been written on the subject of Parkinson's Disease, their discussions of treatment have not been in depth. Dr. Ahlskog sifts through aspects of the disease in order to give the reader a comprehensive sense of Parkinson's and the best available treatment options. With a broader understanding of the disease and the available options, patients are able to make more informed choices, and doctors are able to provide more tailored care. This book delivers hopeful, helpful, and extensive information to all parties concerned: patients, caregivers, and doctors. The ultimate guide to symptoms and treatment, this thoroughly updated second edition is the first place patients should turn for reliable, easy-to-grasp information on Parkinson's Disease.

Carotid and Vertebral Artery Dissection Nov 25 2019 Carotid and vertebral artery dissections are responsible for one-quarter of strokes in young adults. Despite this fact, there is very little awareness and understanding of these vascular injuries by the public, and even by healthcare providers. This book answers the common questions that patients with carotid and vertebral artery dissections have with easy-to-understand explanations. Also included are stories from patients who have persevered after their dissections. Their tales personalize dissection and stroke in young adults in an undeniable way, and illustrate the existence of the lingering effects dissections can have on patients for years. Jodi A. Dodds, MD, a vascular neurologist at Duke University, and Amanda P. Anderson, MS, CCC-SLP, a speech-language pathologist and a survivor of a severe carotid artery dissection, have created an important and needed resource for patients and their families as they navigate through the aftermath of this life-changing event.

Tele-NeuroRehabilitation Dec 27 2019

Cognitive Aphasiology - A Usage-Based Approach to Language in Aphasia Sep 23 2019 Aphasia is the most common acquired language disorder in adults, resulting from brain damage, usually stroke. This book firstly explains how aphasia research and clinical practice remain heavily influenced by rule-based, generative theory, and summarizes key shortcomings with this approach. Crucially, it demonstrates how an alternative — the constructivist, usage-based approach — can provide a more plausible theoretical perspective for characterizing language in aphasia. After detailing rigorous transcription and segmentation methods, it presents constructivist, usage-based analyses of spontaneous speech from people with various aphasia 'types', challenging a clear-cut distinction between lexis and grammar, emphasizing the need to consider whole-form storage and frequency effects beyond single words, and indicating that individuals fall along a continuum of spoken language capability rather than differing categorically by aphasia 'type'. It provides original insight into aphasia — with wide-reaching implications for clinical practice —, while equally highlighting how the study of aphasia is important for the development of Cognitive Linguistics.

Aphasia Rehabilitation Sep 27 2022

The Brain Injury Workbook Nov 05 2020 Evolved from working with head injured groups at Headway and those attempting to return to work, this is a rich, comprehensive and photocopiable workbook for professionals, carers and clients. It contains over 140 cognitive rehabilitation exercises - tailored for memory, thinking skills, executive functions, awareness and insight, and emotional adjustment. It provides more than 40 information sheets on key problem areas, with questions for the reader, designed to educate and stimulate thinking and discussion. It is suitable for both individuals and groups. It includes questionnaires for clients to complete with or without help and quizzes to evaluate and encourage information retention. Primarily for professionals where exercises or handout sheets can be photocopied and used therapeutically, The Brain Injury Workbook can also be used by carers or family members to provide stimulating activities for a head-injured person. In addition, the head-injured person themselves can work through the book on their own.

The Teaching of Talking Mar 22 2022 In this guide, a speech pathologist teaches readers the methods implemented to improve talking in others, so if need be, they can do therapy on their own. People with speaking difficulties are at the mercy of insurance companies who are determining how often and for how long speech therapy services should be delivered. It is also a disturbing reality that the likelihood for therapy frequency and length of care is contingent upon either the level of competence or comfort level of the speech-language pathologist or the financial policies of each institution. Often it has nothing to do with the severity or need for speech therapy. Our health care system is in no position to bankroll the long-term therapy needed by the many people who have moderate to profound speaking difficulties. The goal of The Teaching of Talking is to ensure that any loved one, caregiver, or speech-language pathologist is thoroughly knowledgeable in methods to help people improve talking since it is never known when the plug will be pulled on speech and language therapy services. Ittleman says, "I see hundreds of people with speech and language difficulties each year. By reading and applying The Teaching of Talking, you will have the confidence to help your client or loved one, no matter what the insurance company or institution does. By learning to do what is in The Teaching of Talking, you will be more self-sufficient and will not have to rely on anyone to provide your loved one with expert speech therapy." "The methods of home practice with family members will be of great value for patients with aphasia." —Daniel R. Boone, PhD, CCC/SLP

Under The Eye Of The Clock Jan 26 2020 A powerful and moving autobiography from a gifted writer who has been compared to Joyce and Yeats. 'A book of sheer wonder. As an author he competes as an equal with the ablest of them' DAILY EXPRESS This is the story of Joseph Meehan, born cruelly handicapped and known to the world as 'the crippled boy'. Filled with insight into the soul inside a broken body and warm with the beauties of the Irish landscape it is the story of Joseph's fight to escape the restrictions and confines of his existence. UNDER THE EYE OF THE CLOCK can also be read as the autobiography of its

author, Christopher Nolan.

Healing the Broken Brain Sep 03 2020 Dr. Mike Dow is a best-selling author, psychotherapist, and relationship expert. So why is he writing a book about stroke? Well, what you probably don't know about Dr. Mike is that his younger brother, David, is a stroke survivor. What's more, David's stroke happened when he only 10 years old. This means most of Dr. Mike's teenage years were spent witnessing what his family was dealing with trying to find the best treatments for David. He struggled to know what to do to help his brother. He watched helplessly as his brother wrestled with depression, trying to find the motivation to recover on top of the challenges of adolescence. He mourned the loss of what could have been—and he was angry. How his family would have loved to sit down with top experts in stroke to find out what they should be doing and have their questions answered. Now Dr. Mike has the ability to do just that, and he's doing it so that others in his family's position don't have the same struggle. Armed with questions from stroke survivors and their loved ones, Dr. Mike talks with the best clinicians across the country to get over 100 answers you need to know to maximize your recovery.

Stroke Diary Dec 07 2020 Stroke and brain injury resulting in aphasia and losing the ability to read, write, or speak is a devastating disability. This primer provides an array of tools for aphasia therapy and rehabilitation that spur learning for recovery, and to regain those lost skills. On September 26, 2011, Tom Broussard, a recent Ph.D. with an emphasis on helping people with disabilities get work, experienced his stroke in the area of the brain called Broca's area rendering him unable to read, write or speak well. Aphasia, the impairment of language, was the result. He kept a diary using drawings, charts and graphic representations including using mostly real words that didn't make much sense. Losing his language meant losing his grammar and syntax. Writing his diary, recording his voice and studying his brain for 9 months, he experienced what the scientists call, "spontaneous recovery." In addition to his own voice, he developed another "voice" (or two) that helped him understand the condition of his thinking and how thinking works. Broussard has been speaking to hospitals, clinics and a wide audience of people with strokes, caregivers, students, and medical professionals with an interest in how our brain works and how recovery is accomplished by someone who saw his brain from the inside. It is a valuable resource with an inspiring story that touches everyone connected to strokes and aphasia.

specific clinical challenges, practical suggestions to facilitate clinical application and maximize clinical usefulness. This resource integrates theoretical and practical information to aid a clinician in planning treatment for individuals with aphasia.

Stronger After Stroke Mar 10 2021 Billions of dollars are spent on stroke-related rehabilitation research and treatment techniques but most are not well communicated to the patient or caregiver. As a result, many stroke survivors are treated with outdated or ineffective therapies. Stronger After Stroke puts the power of recovery in the reader's hands by providing simple to follow instructions for reaching the highest possible level of healing. Written for stroke survivors, their caregivers, and loved ones, Stronger After Stroke presents a new and more effective treatment philosophy that is startling in its simplicity: stroke survivors recover by using the same learning techniques that anyone uses to master anything. Basic concepts are covered, including: Repetition of task-specific movements Proper scheduling of practice Challenges at each stage of recovery Setting goals and recognizing when they have been achieved The book covers the basic techniques that can catapult stroke survivors toward maximum recovery. Stronger After Stroke bridges the gap between stroke survivors and what they desperately need: easily understandable and scientifically accurate information on how to achieve optimal rehabilitation.

Aphasia and Related Neurogenic Communication Disorders Feb 06 2021 "Aphasia and Related Neurogenic Communication Disorders is designed for the graduate course on Aphasia. Part 1 of the textbook covers aphasiology, while part 2 addresses related disorders. Overall, the textbook offers an overview of aphasia and related neurogenic communication disorders by presenting important recent advances and clinically relevant information. It emphasizes Evidence Based Practice by critically reviewing the pertinent literature and its relevance for best clinical practices. Case studies in all clinical chapters illustrate key topics, and a "Future Directions" section in each chapter provides insight on where the field may be headed. The WHO ICF Framework is introduced in the beginning of the text and then reinforced and infused throughout"--

Finding My Words May 12 2021 "Michael's book of poetry is an act of courage and of beauty. In Finding My Voice, Michael uses poems to render the experience of living with aphasia with tenderness, frustration, and eloquence. Aphasia changes our relationship to words, as both Michael and I know all too well. And yet a changed relationship is not a broken one, just like a life redirected by a singular traumatic event is not a broken one. Michael epitomizes so beautifully finding purpose in hardship, and I'm so grateful for the gift of this unforgettable collection of poems." -Gabby Giffords, former Congresswoman "Finding My Words is a gift to the world. Michael Obel-Omia's voice is so important; it is so hard to express oneself with Aphasia. I trembled with familiarity reading many of the poems. Anyone who wants to understand aphasia-whether you have it or not-should read this book." -Debra Meyerson, PhD.

Professor, Stanford University; Author of Identity Theft: Rediscovering Ourselves After Stroke "Finding My Words is an astonishing, humbling, extraordinary and stunning collection. It speaks to the resiliency of the human spirit and should be required reading for everyone involved with the aphasia community as well as anyone with an appreciation of poetry as a means of expression. Michael Obel-Omia immerses the reader into the vortex of aphasia, challenging, teaching, and inspiring us along the way as he sheds light on this little known and often misunderstood condition." -Jerome Kaplan, MA, CCC-SLP Speech-language pathologist

Stroke Diary Feb 27 2020 The author had a stroke with brain injury and disability from aphasia. His rehabilitation included a diary about having lost his language and aphasia therapy leading to his recovery.

Neuroscience and Neurology are studying the nervous system and the enriched environment that provides improvement.

Finding My Voice with Aphasia Jul 26 2022 On June 9, 2009, Carol M. Maloney, a veteran teacher, experienced a transient ischemic attack in the left hemisphere of her brain. She helplessly observed her mind deteriorate to the point where she could not speak, walk, read, identify household objects, or recall her family. Maloney traveled between the worlds of the surreal and the logical. The stroke resulted in aphasia, the loss of communication and other functions of her left hemisphere. After eighteen months of rehabilitation, she was finally able to communicate with others by using her hand as a metronome. The frustration of having the words and sentences formed in her mind but being unable to share them caused frustration and depression. Her verbal abilities suffered, along with her reading and comprehension skills. Even so, hard work, strong will, and persistence has allowed her to reach out to other

teachers to offer new insight into the minds of her beloved special-education and reading-disabled students. In this, her story, Maloney turns her experience into a unique opportunity to gain an understanding of her students' difficulties and to share that knowledge with other teachers. "Ms. Carol Maloney has written a compelling story that chronicles her amazing life before, during, and after her devastating stroke. She writes with frankness that touches one's heart. Her story will lend encouragement to those who have suffered a stroke as well as offer strategies to those who have a loved one recovering from one. Carol Maloney developed aphasia after her stroke. I am happy to say that she has survived and conquered both the devastation of her stroke and her aphasia. I know this first hand: she conducts amazing PowerPoint presentations to my graduate class at Rivier University each semester. She is an inspiration to all who want to improve themselves. In this book, Carol clearly describes the strategies that she used to help her become the functioning writer and speaker that she is today." J. Diane Connell, Ed.D.

WONDERFUL RESULTS! #1 Best Seller in Stroke Puzzle Books. 50 challenging & funny puzzle types with increasing difficulty; including popular TV shows & Hollywood movies & stars puzzles to recover cognitive and memory functions. Excellent for caregivers! Customer: "Great gift for my mom!!!" Most puzzles are large print. Word, logic, picture & math puzzles are recommended for patients by doctors, neurologists, speech & cognitive therapists to rebuild mental abilities in language, math & logic. Puzzles are essential for brain rehabilitation. Neurologist: "For stroke victims, I suggest word-guess puzzles because they can't really do the New York Times Sunday magazine crossword puzzle." Word search puzzles help to reestablish visual quickness and vocabulary. In addition to word puzzles, the provided shopping math & airline travel math puzzles will help to rebuild the stroke survivor's math, comprehension & logical thinking capabilities for everyday life. The puzzle book also boasts a number of adult coloring pages and picture puzzles. Medical research shows: "For the stroke patient, coloring is a good way for strengthening fine motor skills (writing, driving, sewing arts...) & to reintegrate the left and right sides of the brain. The left side is dominantly for logical processing while the right side features color graphics processing." The Diagonal Word Square Puzzles are arranged in increasing difficulty levels. The puzzle solver has to find the missing letters for short words; each row and the diagonal will spell a word. Puzzles are valuable rehab tools in the hands of people who experience the cognitive and physical deficits frequently associated with stroke. Inability to pay attention is common for stroke survivors. Other deficits may include comprehension, reading, and

writing. The human brain is extremely flexible and it can be rewired for better functioning after a stroke. To learn how to pay better attention, stroke patients can solve puzzles that require focus. Others skills targeted by puzzle solving (which may improve comprehension, reading, and writing) include speech, concentration, memory, word-finding, and motor skills. When puzzles are used for stroke patients, the key is to choose a puzzle that is effective and enjoyable for the patient like brain games. The puzzles in this book are effective because they can be completed easily and in a short amount of time, usually in a single sitting. Because they are not difficult, solving them imparts a sense of accomplishment. Puzzle contents stimulate emotions and memories, conversation and reminiscing. Puzzles are a great brain exercise and memory activity that captures and improves attention. Puzzles encourage the use of problem-solving skills. In addition, they are fun; patients relax, smile, and laugh. Brain puzzles have been used throughout history for recreation, as medicine, as meditation, as a source of beauty. While this book is aimed directly at stroke survivors for stroke rehabilitation it is highly recommended to seniors, caregivers, loved ones and friends as well. WALC 1 Jan 20 2022 Written in the best-selling format of the WALC series, these activities have: easy-to-read format simple, concise language application to a wide range of acquired language disorders consistent progression of complexity within and between tasks Activities are organized by five skill areas: Matching and Identification Tasks begin simply, with single, more concrete items and progress to more complex tasks. The tasks are receptive. Clients match shapes, letters of the alphabet, and words. Then, they match written words, phrases, and sentences to pictures. Following Commands Clients follow oral and written directions requiring comprehension of body parts, objects, prepositions (e.g., over, out), and adjectives (e.g., heaviest, shortest). Vocabulary These activities target deficits in comprehension and expression. Clients choose words and supply words to complete word pairs, familiar phrases, and synonyms. Other tasks include matching words to simple definitions and clues; naming items by word class; and supplying item functions and descriptions. Answering Questions The client either listens to, or reads a sentence, and answers simple wh-questions. The questions require one-, two-, and three-word responses. Yes/no questions about object functions progress from simple (e.g., Do boats float?) to more complex and abstract (e.g., Is a road wider than a sidewalk?). Comparison, before/after, and simple reasoning questions round out the activities. Functional Language These activities build on the previous units by increasing the complexity and content level. Questions may have more than one right answer or require expression of opinions. Tasks include cloze phrase and sentence completion, open sentence completion, paragraph comprehension, paragraph fill-in-the-blanks, predicting from a short story, and formulating short stories. 222 pages, answer key
