Nov 24 2021 'Seldom does one get a chance to become acquainted with India's great leaders through a young woman so intimately associated with them.'-New York Times Book ReviewA dramatic portrait of the spirit of sacrifice that carried India through the years of the struggle for independence, this evocative memoir of an unusual childhood ends with the assassination of Mahatma Gandhi in 1948.Nayantara Sahgal describes what it was like growing up in Anand Bhavan, Allahabad, the home of her parents shared with her maternal uncle, Jawarlal Nehru, during the years when Gandhi was leading the

movement for independence. It describes in loving detail the lives of a family for whom the country's fight for freedom was more important than anything else, certainly coming before comfort and riches.The book is particularly delightful for its picture of Nehru who springs from these pages as a man of friendly humanity and a joy in life that made him a beloved uncle, yet with an inborn greatness that inspired awe and admiration in the little girl who played with him.'She is brilliant...complex and questioning.' - Pearl S. Emigration from the United Kingdom to North America, 1763 - 1912 Jun 07 2020 First published in 1913, this valuable and scholarly work is an account of the flow of population from the British Isles to the United States and Canada during the nineteenth century and the author's extensive researches into government reports and papers has brought together a great deal of material which gives his book an important place as an authority on British emigration. The work begins with a short historical survey in which the author discusses the causes of

emigration before treating the subject topically as a series of political and economic problems. He gives a detailed account of the transport and reception of emigrants, of emigration restrictions and colonisation schemes, and of the emigration of women and children, and presents with much force the conflict of interests that grew up between England and her colonies respecting migration. This must still be regarded as an authoritative work on the subject and its bibliography will be of great value to all students of the period.

Studies in American Historical Demography Jul 09 2020 Studies in American Historical Demography is a

collection of the best studies in American historical demography. The book discusses some methodological and conceptual considerations in the trends in American historical demography; the demographic history of colonial New England; and the marital migration in Essex County, Massachusetts, in the colonial and early federal periods. The text also describes the historical trends in parental power and marriage patterns in Hingham, Massachusetts; the use of demographic data that are, or may be, retrieved from colonial New England gravestones; and the mortality rates and trends in Massachusetts, Massachusetts.

The estimates of the vital rates of the United States black population during the 19th century; the two-parent household; as well as the differential fertility in Madison County, New York, 1865 are also considered. The book further tackles the socioeconomic determinants of interstate fertility differentials in the United States in 1850 and 1860; cohorts of native born Massachusetts women, 1830-1920; and the demographic change and the life cycle of American families. Historians, demographers, anthropologists, economists, and sociologists will find the book invaluable.

Spacecraft Operations Jun 19 2021 This book describes the basic concepts of spacecraft operations for both manned and unmanned missions. The first part of the book provides a brief overview of the space segment. The next four parts deal with the classic areas of space flight operations: mission operations, communications

and infrastructure, the flight dynamics system, and the mission planning system. This is followed by a part describing the operational tasks of the various subsystems of a classical satellite in Earth orbit. The last part describes the special requirements of other mission types due to the presence of astronauts, the approach of a satellite to another target satellite, or leaving Earth orbit in interplanetary missions and landing on other planets and moons. The 2nd edition is published seven years after the first edition. It contains four new chapters on flight procedures, the human factors, ground station operation, and

software and systems. In addition, several chapters have been extensively expanded. The entire book has been brought up to date and the language has been revised. This book is based on the "Spacecraft Operations Course" held at the German Space Operations Center. However, the target audience of this book is not only the participants of the course, but also students of technical and scientific courses, as well as technically interested people who want to gain a deeper understanding of spacecraft operations. Network and Migration in Early Renaissance Florence, 1378-1433

Aug 22 2021 This book explores the co-development of political, social, economic, and artistic networks of Florentines in the Kingdom of Hungary during the reign of Sigismund of Luxembourg. Analyzing the social network of these politicians, merchants, artisans, royal officers, dignitaries of the Church, and noblemen is the primary objective of this book. The study addresses both descriptively the patterns of connectivity and causally the impacts of this complex network on cultural exchanges of various types, among these

migration, commerce, diplomacy, and artistic exchange. In the setting of a case study, this monograph should best be thought of as an attempt to cross the boundaries that divide political, economic, social, and art history so that they simultaneously figure into a single integrated story of Florentine history and development.

Federalism and Ethnic Conflict Regulation in India and Pakistan

understanding the different intensity and types of conflict in the two countries rather than the role of religion. Adeney examines the extent to which previous constitutional choices explain current day conflicts.

Computer software is an essential tool for many statistical modelling and data analysis techniques, aiding in the implementation of large data sets in order to obtain useful results. R is one of the most powerful and flexible statistical software packages available, and enables the user to apply a wide variety of statistical methods ranging from simple regression to

generalized linear modelling. Statistics: An Introduction using R is a clear and concise introductory textbook to statistical analysis using this powerful and free software, and follows on from the success of the author's previous best-selling title Statistical Computing. * Features step-by-step instructions that assume no mathematics, statistics or programming background, helping the non-statistician to fully understand the methodology. * Uses a series of realistic examples, developing step-wise from the simplest cases, with the emphasis on checking the assumptions (e.g. constancy of variance and normality of errors) and the

adequacy of the model chosen to fit the data. * The emphasis throughout is on estimation of effect sizes and confidence intervals, rather than on hypothesis testing. * Covers the full range of statistical techniques likely to be need to analyse the data from research projects, including elementary material like t-tests and chi-squared tests, intermediate methods like regression and analysis of variance, and more advanced techniques like generalized linear modelling. * Includes numerous worked examples and exercises within each chapter. * Accompanied by a website featuring worked examples, data sets, exercises and solutions:

<http://www.imperial.ac.uk/bio/research/crawley/statistics> Statistics: An Introduction using R is the first text to offer such a concise introduction to a broad array of statistical methods, at a level that is elementary enough to appeal to a broad range of disciplines. It is primarily aimed at undergraduate students in medicine, engineering, economics and biology - but will also appeal to postgraduates who have not previously covered this area, or wish to switch to using R. Ramonst Oct 24 2021 Hidden in the mountains of East Tennessee, an eleven-year old goes about the business of being a boy during the summer

of 1970. Within a balance of terror and innocence, he bears silent witness to ghosts of the dead and the cruelties of a teenage killer while local justice plays out in a community carved from legacies of coal mining and religion.

Monk and Mason on the Tigris Frontier May 31 2022

Tur Abdin is a plateau skirted by the Upper Tigris in Southeastern Turkey where Syrian Orthodox Christians of Aramaic tongue still worship in Late Antique churches. Monks converted the region and the most powerful monastery, founded in the fourth century, is still flourishing today. Documenting more fully the

early history of this abbey, the author aims to rediscover the practical and symbolic function of the monuments of Tur Abdin and place them in their original social context.

Building Coherence and Cohesion Jul 01 2022 This book examines the resources that speakers employ when building conversations. These resources contribute to overall coherence and cohesion, which speakers create and maintain interactively as they build on each other's contributions. The study is cross-linguistic, drawing on parallel corpora of

task-oriented dialogues between dyads of native speakers of English and Spanish. The framework of the investigation is the analysis of speech genres and their staging; the analysis shows that each stage in the dialogues exhibits different thematic, rhetorical, and cohesive relations. The main contributions of the book are: a corpus-based characterization of a spoken genre (task-oriented dialogue); the compilation of a body of analysis tools for generic analysis; application of English-based analyses to Spanish and comparison between the two languages; and a study of the characteristics of each generic

stage in task-oriented dialogue.
