[Superabundance](#) Dec 18 2021 Generations of people have been taught that population growth makes resources scarcer. In 2021, for example, one widely publicized report argued that "The world's rapidly growing population is consuming the planet's natural resources at an alarming rate . . . the world currently needs 1.6 Earths to satisfy the demand for natural resources . . . [a figure that] could rise to 2 planets by 2030." But is that true? After analyzing the prices of hundreds of commodities, goods, and services spanning two centuries, Marian Tupy and Gale Pooley found that resources became more abundant as the population grew. That was especially true when they looked at "time prices," which represent the length of time that people must work to buy something. To their surprise, the authors also found that resource abundance increased faster than the population—a relationship that they call superabundance. On average, every additional human being created more value than he or she consumed. This relationship between population growth and abundance is deeply counterintuitive, yet it is true. Why? More people produce more ideas, which lead to more inventions. People then test those inventions in the marketplace to separate the useful from the useless. At the end of that process of discovery, people are left with innovations that overcome shortages, spur economic growth, and raise standards of living. But large populations are not enough to sustain superabundance—just think of the poverty in China and India before their respective economic reforms. To innovate, people must be allowed to think, speak, publish, associate, and disagree. They must be allowed to save, invest, trade, and profit. In a word, they must be free.

[Why \(Smart Companies\) Do Dumb Things](#) Jan 07 2021 Innovation is the lifeblood of American business. Without the creativity to find the next must-have product or service, companies quickly lose their competitive edge. Knowing this, corporate leaders invest heavily in research and development. Notwithstanding the dollars spent on R & D, the fact remains that better than 90 percent of innovation initiatives fail to achieve their return-on-investment targets. Poor management decisions and lack of marketplace savvy often undermine even huge research efforts. Can America continue to be a formidable global competitor with this kind of failure rate? Taking a case history approach, Calvin Hodock examines eight typical innovation blunders that continually doom new product development. From misjudging the market and "dead-on-arrival products" to "fatal frugality" and "timetable tyranny," he discusses not only why such mistakes occur but also the dire consequences to both investors and employees. When Polaroid declared bankruptcy, because it missed the digital imaging trend, the company's employees lost their retirement and pension benefits. Now the failure of the American automobile industry to create "gotta have" cars threatens to wreak long-term havoc in a large segment of American workers. Among the problems Hodock points to are breakdowns in the marketing research process, marketing dishonesty, lack of real-world preparation among newly graduated MBAs, CEOs under pressure to deliver unrealistic earning targets, clueless boards of directors, and the general absence of accountability. After analyzing each problem, Hodock emphasizes the lesson learned and concludes with a list of best practices for successful innovation. He shows how even modest improvements in the innovation process can double the bottom line for any company while making their shareholders more prosperous and happier. Hodock's incisive analysis and illuminating new approaches to successful development and marketing are must reading for students of business, seasoned corporate executives, and anyone interested in the future of American business.

How Do I Tax Thee? Dec 30 2022 Libertarian journalist Kristin Tate provides a look into the wild world of frivolous taxation, aimed at educating members of her own generation in the evils of big government. In *How Do I Tax Thee?*, libertarian commentator and rising media star Kristin Tate takes us on a tour of the ways the government bleeds us dry in innumerable daily transactions and at various stages of life. We all know the government taxes our pay: federal, state, and local taxes are withheld by employers, as are social security payments. But what about the many other ways the government drains money from our wallets? Have you studied your cell phone bill? Customers in New York State pay an average of 24.36% in federal, state and local taxes on their wireless bills. They're also charged for obscure services they didn't ask for and don't understand like a universal service fund fee, an FCC compliance fee, a line service fee, and an emergency services fee. These aren't taxes, strictly speaking. The government imposes these administrative and regulatory costs, and your wireless provider passes them along to you. But the effect is exactly the same. What about your cable bill? Your power bill? Your water bill? The cost of a gallon of gas, a cab ride, a hotel stay and a movie ticket are all inflated by hidden fees. How much of what you pay at the pump, the box office, or the airport is really an indirect tax? In a series of short, pointed, fact-laden, humorous chapters, Tate exposes the vast government shakedown that consumes up to half of your income—and also explains where these hidden fees and taxes come from.
