Structural Steel Design to Eurocode 3 and AISC

Specifications Sep 28 2022 Structural Steel Design to Eurocode 3 and AISC Specifications deals with the theory and practical applications of structural steel design in Europe and the USA. The book covers appropriate theoretical and background information, followed by a more design-oriented coverage focusing on European and United States specifications and practices, allowing the reader to directly compare the approaches and results of both codes. Chapters follow a general plan, covering: • A general section covering the relevant topics for the chapter, based on classical theory and recent research developments

• A detailed section covering design and detailing to Eurocode 3 specification • A detailed section covering design and detailing to AISC specifications Fully worked examples are using both codes are presented. With construction companies working in increasingly international environments, engineers are more and more likely to encounter both codes. Written for design engineers and students of civil and structural engineering, this book will help both groups to become conversant with both code systems.

Electromagnetic Nondestructive Evaluation (XX) May 25 2022 Electromagnetic Nondestructive Evaluation (ENDE) provides an important method for assessing the condition of objects by observing the electromagnetic response to electric currents and/or magnetic fields introduced within them. Because it does not

permanently alter the objects being tested, it is an invaluable tool for product evaluation, troubleshooting and research, and is employed in many fields from engineering and medicine to art. This volume presents selected papers from the International Workshop on Electromagnetic Nondestructive Evaluation (ENDE2016), held in Lisbon, Portugal, in September 2016. This 21st edition of the workshop focused on the

theoretical and application research into methods of electromagnetic non-destructive evaluation and, like previous editions, provided a forum for exchanging ideas and discussing recent developments. The book is divided into 6 sections which cover advanced ENDE sensors; material characterization; new developments; analytical and numerical modeling; inverse problems; signal processing;

monitoring and diagnosis of mechanical structures; and innovative industrial applications of ENDE. Providing an overview of recent research and developments in the field, the book will be of interest to all those involved in ENDE research or applying it in their work.
