This book serves as a comprehensive introduction to European banking and financial law. The book is organized around the three economic themes that are central to the financial industry: (i) financial markets; (ii) banking and financial institutions; and (iii) financial transactions. It covers not only regulatory law, but also commercial law that is relevant for the most important financial transactions. This second edition has been completely revised. The basic structure of the first edition has been maintained, but all chapters have been thoroughly rewritten and restructured. Attention is now also shed on topics such as shadow banking and credit rating agencies. As a matter of course, all new relevant legislation and case law has been included. Also, on the basis of real-life class-room experience, student questions and further reading suggestions have been updated and expanded.*

It builds upon recent, carefully selected case studies from the US, the EU, the UK, Spain and Hungary to answer the questions of what went wrong with the bank bailouts in the EU, why the US performed better in terms of crisis management, and how bailouts could be regulated and conducted more successfully in the future. Employing a comparative methodology, it examines the different bailout and bank resolution techniques and tools and identifies the pros and cons of the different legal and regulatory options and their underlying principles. In the post-2008 legal-regulatory architecture financial institution specific insolvency proceedings were further developed or implemented on both sides of the Atlantic. Ten years after the most recent financial crisis, there is sufficient empirical evidence to evaluate the outcomes of the bank bailouts in the US and the EU and to examine a number of cases under the EU's new bank resolution regime. This book will be of interest of anyone in the field of finance, banking, central banking, monetary policy and insolvency law.
