**Approaches and Theories to standard setting in Accounting** Oct 24 2019 Essay from the year 2011 in the subject Business economics - Accounting and Taxes, grade: 64, University of Westminster (Westminster Business School), course: Financial Accounting and Policy, language: English, abstract: Since the financial crisis in 2008 the topic regulation of the markets at all revived. The world was looking for guilty parties in Rating agencies, financial institutions, governments and lastly audit firms and institutions which gave them their working framework – the accounting standards. On the one hand the scream for more regulation in the private sector to protect the public good became louder and on the other hand scientists were warning of such overbearing steps because they would be damaging the economy. This issue provides the basis for this paper where accounting is seen as an eco-nomic good. Accounting information is not costless to produce for the corporations and it raises compliance costs. On the one hand managers are using accounting rules that minimize information costs and on the other hand shareholders want ac-counting rules that improve their ability to control and monitor the manager's action. Theoretically, financial accounting and reporting should be objective, neutral and apolitical. However, the standard setting process can be influenced by external groups with different interests.

**An Introduction to Modern Financial Reporting Theory** Apr 30 2020 The adoption by the Accounting Standards Board of its Statement of Principles for Financial Reporting in December 1999 means that we now have an authoritative conceptual framework which should govern the production of British financial statements. Yet while the text of the Statement is directed at members of the accounting profession, students of accounting will need to understand the framework and its repercussions. An Introduction to Modern Financial Reporting Theory explains the content of the Statement in an accessible language, specifically for the student of accounting and finance. This text will be of direct and practical interest to students who need to understand the contents of the new framework, which helps to explain: why and how financial reporting is carried out; why financial statements are prepared in the way that they are; why accounting standards specify one method rather than another; how the methods specified by accounting standards relate to each other; how practice has developed and will continue to develop. Brian Rutherford emphasizes and enlarges on the key features of the framework, provides many more examples, shows how the framework applies in practice and also offers some criticisms of its content. The book clarifies to students why various methods and practices in accounting have evolved, while illustrating how they relate to each other and to the underlying function of financial reporting. This text will be essential reading on university and professional courses in advanced financial accounting, particularly courses on Accounting Theory and Financial Reporting. Brian Rutherford is Professor of Accounting at Canterbury Business School, University Kent at Canterbury.
