Routledge Library Editions Apr 04 2020 This set of three previously out-of-print volumes collects together in one place key areas of research into the genre of science fiction. It critically

examines science fiction, establishing its common themes and definitions, and comprehensively assesses the sci-fi world in its entirety.

Fantasy and Mimesis (Routledge Revivals) Aug 28 2019 Since Plato and Aristotle's declaration of the essence of literature as imitation, western narrative has been traditionally discussed in mimetic terms. Marginalized fantasy- the deliberate from reality – has become the hidden face of fiction, identified by most critics as a minor genre. First published in 1984, this book rejects generic definitions of fantasy, arguing that it is not a separate or even separable strain in literary practice, but rather an impulse as significant as that of mimesis. Together, fantasy and mimesis are the twin impulses behind literary creation. In an analysis that ranges from the Icelandic sagas to science fiction, from Malory to pulp romance, Kathryn Hume systematically examines the various ways in which fantasy and mimesis contribute to literary representations of reality. A detailed and comprehensive title, this reissue will be of particular value to undergraduate literature students with an interest in literary genres and the centrality of literature to the creative imagination.

Against Automation Mythologies Feb 01 2020 Inspired by Roland Barthes's practice of "semioclasms" in *Mythologies*, this book offers a "technoclasms"; a cultural critique of US narratives, discourses, images, and objects that have transformed the politics of automation into statements of fact about the "rise of the robots". Treating automation as an ensemble of technologies and science fictions, this book foregrounds automation's ideologies, exaggerations, failures, and mystifications of the social value of human labor in order to question accepted and prolific automation mythologies. Jesse Ramirez offers a study of automation that recognizes

automation as a technosocial project, that uses the tools of cultural studies and history to investigate the narratives and ideologies that often implicitly frame the automation debate, and that concretely and soberly assesses the technologies that have made the headlines. The case studies featured include some of the most widely cited and celebrated automatic technologies, such as the Baxter industrial robot, the self-driving car, and the Watson AI system. An ideal resource for anyone interested in or studying emerging technology and society, automation, Marxian cultural theory, cultural studies, science fiction studies, and the cultural history of technology.

Poli Sci Fi May 30 2022 *Poli Sci Fi: An Introduction to Political Science through Science Fiction* allows readers, students, and instructors to explore the multiple worlds of science fiction while gaining a firm grasp of core political science concepts. This carefully composed text is comprised of sixteen brief chapters, each of which takes a prominent science fiction film or television episode and uses it to explore fundamental components of political science. The book is designed to serve as a supplemental text for undergraduate political science courses, especially *Introduction to Political Science*. The structure and content of the volume is shaped around the organization and coverage of several leading texts in this area, and includes major parts devoted to theory and epistemology, political behavior, institutions, identity, states, and inter-state relations. Its emphasis on science fiction—and particularly on popular movies and television programs—speaks to the popularity of the genre as well as the growing understanding that popular culture can be an extraordinarily successful vehicle for communicating difficult yet foundational concepts, especially to introductory level college students.

The World of Science Fiction, 1926-1976 Oct 11 2020 This book, first published in 1980, is a guide to the major forces in the subculture of science fiction. It analyses the history of the field and the related developments, for instance the Bomb, that have shaped the literature. It examines the complex of activity and background tradition, the body of accepted beliefs and conventions, and the ethics and values of the world of science fiction.

Neoliberalism and Cyberpunk Science Fiction Dec 25 2021 Caroline Alphin presents an original exploration of biopolitics by examining it through the lens of cyberpunk science fiction.

Comprised of five chapters, *Neoliberalism and Cyberpunk Science Fiction* is guided by four central themes: biopolitics, intensification, resilience, and accelerationism. The first chapters examine the political possibilities of cyberpunk as a genre of science fiction and introduce one kind of neoliberal subject, the self-monitoring cyborg. These are individuals who join fitness/health tracking devices and applications to their body to "self-cultivate". Here, Alphin presents concrete examples of how fitness trackers are a strategy of neoliberal governmentality under the guise of self-cultivation. Moving away from Foucault's biopolitics to themes of intensity and resilience, Alphin draws largely from William Gibson's *Neuromancer*, Neal Stephenson's *Snow Crash*, Richard K. Morgan's *Altered Carbon*, along with the film *Blade Runner* to problematize notions of neoliberal resilience. Alphin returns to biopolitics, intensity, and resilience, connecting these themes to accelerationism as she engages with biohacker discourses. Here she argues that a biohacker is, in part, an intensification of the self-monitoring cyborg and accelerationism is in the end another form of resilience. *Neoliberalism and Cyberpunk Science Fiction* is an invaluable resource for those interested in security studies,

political sociology, biopolitics, critical IR theory, political theory, cultural studies, and literary theory.

Science Fiction Sep 02 2022 Science Fiction explores the genre from 1895 to the present day, drawing on examples from over forty countries. It raises questions about the relationship between science fiction, science and technology, and examines the interrelationships between spectacle, narrative and self-reflexivity, paying particular attention to the role of special effects in creating meaning and affect. It explores science fiction's evocations of the sublime, the grotesque, and the camp, and charts the ways in which the genre reproduces and articulates discourses of colonialism, imperialism and neo-liberal globalization. At the same time, Science Fiction provides a thorough analysis of the genre's representation of race, class, gender and sexuality, making this text an essential guide for students, academics and film fans alike. Key films discussed include: *Le voyage dans la lune* (1902) *20,000 Leagues under the Sea* (1916) *L'Atlantide* (1921) *King Kong* (1933, 2005) *Gojira* (1954) *La Jetée* (1962) *The Abominable Dr Phibes* (1971) *Tetsuo* (1989) *Sleep Dealer* (2008) *Avatar* (2009)

Science Fiction Film, Television, and Adaptation Dec 01 2019 While film and television seem to be closely allied screen media, our feature films and television series have seldom been successfully adapted across those screens. In fact, rather than functioning as portals, those allied media often seem, quite literally, screens that filter out something that made the source work so popular in its original form. Differences in budget, running times, cast, viewing habits, screen size and shape all come into play, and this volume's aim is to track a number of popular texts in the course of their adaptive journeys across the screens in order to sketch the workings of that

cross-media adaptation. For its specific examples, the volume draws on a single genre—science fiction—not only because it is one of the most popular today in either film or television, but also because it is arguably the most self-conscious of contemporary genres, and thus one that most obviously frames the terms of these technological adaptations. The essays included here mine that reflexive character, in both highly successful and in failed efforts at cross-media adaption, to help us understand what film and television achieve in screening science fiction, and to reveal some of the key issues involved in all of our efforts to navigate the various screens that have become part of contemporary culture.

Science Fiction and Organization Mar 28 2022 Science fiction can be seen as a diagnosis of the present, and a vision of possible futures. It therefore provides an excellent resource with which to interrogate both contemporary organizing processes and organizations as institutions. The marginal activity of science fiction has, however, been largely ignored in writing on organization theory. This international collection is the first book of its kind to explore how science fiction can enrich studies of organization by drawing on perspectives across the arts and social sciences.

Enlightenment and Political Fiction Jul 08 2020 The easy accessibility of political fiction in the long eighteenth century made it possible for any reader or listener to enter into the intellectual debates of the time, as much of the core of modern political and economic theory was to be found first in the fiction, not the theory, of this age. Amusingly, many of these abstract ideas were presented for the first time in stories featuring less-than-gifted central characters. The five particular works of fiction examined here, which this book takes as embodying the core of the Enlightenment, focus more on the individual than on social group. Nevertheless, in these same

works of fiction, this individual has responsibilities as well as rights—and these responsibilities and rights apply to every individual, across the board, regardless of social class, financial status, race, age, or gender. Unlike studies of the Enlightenment which focus only on theory and nonfiction, this study of fiction makes evident that there was a vibrant concern for the constructive as well as destructive aspects of emotion during the Enlightenment, rather than an exclusive concern for rationality.

Surreal Entanglements May 18 2021 This edited collection approaches the most pressing discourses of the Anthropocene and posthumanist culture through the surreal, yet instructive lens of Jeff VanderMeer's fiction. In contrast to universalist and essentializing ways of responding to new material realities, VanderMeer's work invites us to re-imagine human subjectivity and other collectivities in the light of historically unique entanglements we face today: the ecological, technological, aesthetic, epistemological, and political challenges of life in the Anthropocene era. Situating these messy, multi-scalar, material complexities of life in close relation to their ecological, material, and colonialist histories, his fiction renders them at once troublingly familiar and strangely generative of other potentialities and insight. The collection measures VanderMeer's work as a new kind of speculative surrealism, his texts capturing the strangeness of navigating a world in which "nature" has become radically uncanny due to global climate change and powerful bio-technologies. The first collection to survey academic engagements with VanderMeer, this book brings together scholars in the fields of environmental literature, science fiction, genre studies, American literary history, philosophy of technology, and digital cultures to reflect on the environmentally, culturally, aesthetically, and politically central questions his

fiction poses to predominant understandings of the Anthropocene.

The Routledge Research Companion to Nineteenth-Century British Literature and Science Jun 18 2021 Tracing the continuities and trends in the complex relationship between literature and science in the long nineteenth century, this companion provides scholars with a comprehensive, authoritative and up-to-date foundation for research in this field. In intellectual, material and social terms, the transformation undergone by Western culture over the period was unprecedented. Many of these changes were grounded in the growth of science. Yet science was not a cultural monolith then any more than it is now, and its development was shaped by competing world views. To cover the full range of literary engagements with science in the nineteenth century, this companion consists of twenty-seven chapters by experts in the field, which explore crucial social and intellectual contexts for the interactions between literature and science, how science affected different genres of writing, and the importance of individual scientific disciplines and concepts within literary culture. Each chapter has its own extensive bibliography. The volume as a whole is rounded out with a synoptic introduction by the editors and an afterword by the eminent historian of nineteenth-century science Bernard Lightman.

The Routledge Companion to Cyberpunk Culture Dec 13 2020 In this companion, an international range of contributors examine the cultural formation of cyberpunk from micro-level analyses of example texts to macro-level debates of movements, providing readers with snapshots of cyberpunk culture and also cyberpunk as culture. With technology seamlessly integrated into our lives and our selves, and social systems veering towards globalization and

corporatization, cyberpunk has become a ubiquitous cultural formation that dominates our twenty-first century techno-digital landscapes. The Routledge Companion to Cyberpunk Culture traces cyberpunk through its historical developments as a literary science fiction form to its spread into other media such as comics, film, television, and video games. Moreover, seeing cyberpunk as a general cultural practice, the Companion provides insights into photography, music, fashion, and activism. Cyberpunk, as the chapters presented here argue, is integrated with other critical theoretical tenets of our times, such as posthumanism, the Anthropocene, animality, and empire. And lastly, cyberpunk is a vehicle that lends itself to the rise of new futurisms, occupying a variety of positions in our regionally diverse reality and thus linking, as much as differentiating, our perspectives on a globalized technoscientific world. With original entries that engage cyberpunk's diverse 'angles' and its proliferation in our life worlds, this critical reference will be of significant interest to humanities students and scholars of media, cultural studies, literature, and beyond.

This work is designed to give the reader a sense of the breadth and possibilities of economics. Inhabitable Infrastructures Jan 14 2021 *Inhabitable Infrastructures: Science fiction or urban future?*, the follow up to *Food City* and *Smartcities* and *Eco-Warriors*, from one of the world's leading urban design and architectural thinkers, explores the potential of climate change-related multi-use infrastructures that address the fundamental human requirements to protect, to provide and to participate. The stimulus for the infrastructures derives from postulated scenarios and processes gleaned from science fiction and futurology as well as the current body of scientific knowledge regarding changing environmental impacts on cities. Science fiction is interdisciplinary by nature, aggregates the past and present, and evaluates both lay opinions and professional strategies in an attempt to develop foresight and to map possible futures. The research culminates in the creation of innovative multi-use infrastructures and integrated self-sustaining support systems that meet the challenges posed through climate change and overpopulation, and the reciprocal benefits of simultaneously addressing the threat and the shaping of cities. J. G. Ballard has written that the psychological realm of science fiction is most valuable in its predictive function, and in projecting emotions into the future. The knowledge from the book is widely transferable, constituting both solutions and speculative visions of future urban environments. The book is indispensable reading for professionals and students in the fields of urban design, architecture, engineering and environmental socio-politics.

British Science Fiction Cinema Aug 21 2021 *British Science Fiction Cinema* is the first substantial study of a genre which, despite a sometimes troubled history, has produced some of the best British films, from the prewar classic *Things to Come* to *Alien* made in Britain by a British director. The contributors to this rich and provocative collection explore the diverse

strangeness of British science fiction, from literary adaptations like *Nineteen Eighty-Four* and *A Clockwork Orange* to pulp fantasies and 'creature features' far removed from the acceptable face of British cinema. Through case studies of key films like *The Day the Earth Caught Fire*, contributors explore the unique themes and concerns of British science fiction, from the postwar boom years to more recent productions like *Hardware*, and examine how science fiction cinema drew on a variety of sources, from TV adaptations like *Doctor Who* and the Daleks, to the horror/sf crossovers produced from John Wyndham's cult novels *The Day of the Triffids* and *The Midwich Cuckoos* (filmed as *Village of the Damned*). How did budget restrictions encourage the use of the 'invasion narrative' in the 1950s films? And how did films such as *Unearthly Stranger* and *Invasion* reflect fears about the decline of Britain's economic and colonial power and the 'threat' of female sexuality? *British Science Fiction Cinema* celebrates the breadth and continuing vitality of British sf film-making, in both big-budget productions such as *Brazil* and *Event Horizon* and cult exploitation movies like *Inseminoid* and *Lifeforce*.

Race and Popular Fantasy Literature Jun 06 2020 This book illuminates the racialized nature of twenty-first century Western popular culture by exploring how discourses of race circulate in the Fantasy genre. It examines not only major texts in the genre, but also the impact of franchises, industry, editorial and authorial practices, and fan engagements on race and representation. Approaching Fantasy as a significant element of popular culture, it visits the struggles over race, racism, and white privilege that are enacted within creative works across media and the communities which revolve around them. While scholars of Science Fiction have explored the genre's racialized constructs of possible futures, this book is the first examination of

Fantasy to take up the topic of race in depth. The book's interdisciplinary approach, drawing on Literary, Cultural, Fan, and Whiteness Studies, offers a cultural history of the anxieties which haunt Western popular culture in a century eager to declare itself post-race. The beginnings of the Fantasy genre's habits of whiteness in the twentieth century are examined, with an exploration of the continuing impact of older problematic works through franchising, adaptation, and imitation. Young also discusses the major twenty-first century sub-genres which both re-use and subvert Fantasy conventions. The final chapter explores debates and anti-racist praxis in authorial and fan communities. With its multi-pronged approach and innovative methodology, this book is an important and original contribution to studies of race, Fantasy, and twenty-first century popular culture.

A Research Guide to Science Fiction Studies Jan 02 2020 Academic attention to science fiction and fantasy began in 1958, when the Modern Language Association scheduled its first seminar on science fiction at its New York meeting. Over the years science fiction emerged as a popular subject that achieved critical attention and acceptance as an academic discipline. A Research Guide to Science Fiction Studies, originally published in 1977, is designed to provide the reader - whether they be scholar, teacher, librarian, or fan - with a comprehensive listing of the important research tools that have been published in the United States and England through 1976. The volume contains over 400 selected, annotated entries covering both general and specialized sources, including general surveys, histories, genre studies, author studies, bibliographies, and indices, which span the entire range of science fiction and fantasy scholarship.
