Repairs Oct 04 2022 Grammatical structures connect systems of thought and articulation, the conditions of which hardly seem to fit each other. Repairs are productive mechanisms that solve translation problems between modules or levels by adapting derivations or representations to requirements that have to be met unconditionally. Compensating for derivational and interpretive defects, repairs determine core properties of natural language grammars and their interfaces.

[Chinese Grammar at Work](#) Mar 29 2022 Chinese Grammar at Work adopts a cognitive-functional approach and uses a corpus-based methodology to examine how Chinese syntax emerges from natural discourse context and what the evolving grammar at work looks like. In this volume the author weaves together an array of fresh perspectives on clause structure, constructions, interactional linguistics, cognitive science and complex dynamic systems to construct a grammar of spoken Chinese. The volume contains discussions of a large number of topics: contiguity relation, the roles of repair strategies in the shaping of constituent structure, non-canonical word order constructions, pragmatics of referring expressions, classifier constructions, noun-modifying constructions, verb complementation, ethnotheory of the person and constructions specific to the language of emotion, sequential sensitivity of linguistic materials, meaning potential in interaction, the nature of variability and stability in Chinese syntax from the perspective of complexity theory. The result is a volume that highlights the connections between language structure, situated and embodied nature of cognition and language use, and affords a true entrée to the exciting realm of Chinese grammar.

Biomolecular Action of Ionizing Radiation Dec 06 2022 Embracing the transformation of radiation sciences by the recent surge of developments in molecular biology, this progressive text offers an up-to-date analysis of in vitro and in vivo molecular responses in the body induced by ionizing radiation. With a unique emphasis on medical physics applications, Biomolecular Action of Ionizing Radiation also presents a much needed, in-depth perspective on clinical applications for the treatment of cancer and radiation injuries. Based on a popular course given by the author at McGill University, the book places the traditional tenets of radiation biology in the context of contemporary cell and molecular biology. Using terms that non-experts in molecular biology can understand, it clarifies the underlying mechanisms of radiation effects on molecular interactions including signal transduction pathways, modes of cell killing, and non-targeted effects. The author subsequently associates key principles and advances with potential applications, including the use of ionizing radiation as a cytotoxic and cytostatic agent, and radiosensitization by targeting molecular intermediates or signaling molecules involved in radiation-induced processes. Raising the standard for radiation biology texts that are currently available, Biomolecular Action of Ionizing Radiation is an outstanding resource for advanced undergraduate and graduate students in medical physics, radiation oncology, radiation biology, and those who have an interest in the radiation sciences and in cancer treatment.

Studies on Retinal and Choroidal Disorders Oct 31 2019 Studies on Retinal and Choroidal Disorders examines the role that oxidative and nitrosative stress plays in the complex physiology and pathophysiology of the retina and choroid. Both the basic science researcher and the clinical practitioner can use this book as a guide to the current understanding of retinal and choroidal cellular mechanisms involved in aging and disease. Beginning with a review of oxidative stress and inflammation in the pathoetiology of AMD and a review of the complement system in the retina, the book then takes a detailed look at oxidative stress in lipid metabolism and oxidized lipoproteins in the retina. It examines the anti-apoptotic activity of γ -crystallins in the presence of glutathione, oxidative stress in the mitochondria and endoplasmic reticulum, the role of iron in retinal disease, the mechanisms of pathological VEGF expression, NADPH oxidase mechanisms, and Hepatocyte Growth Factor in oxidative stress in the retina. A detailed look at the Ccl2-/-Cx3cr1-/- mouse model of AMD follows. Then a detailed examination of the systemic changes in AMD is followed by a discussion of cerium oxide nanoparticle reduction of oxidative stress. Two chapters discuss progenitor cells in the cause and treatment of retinal diseases including AMD and diabetic retinopathy. Natural compounds in the prevention and treatment of retinal diseases are exhaustively presented, followed by a chapter on serotonin 5-HT1A receptor agonists in oxidative stress of the retina. The current anti-VEGF treatment strategies of neovascular AMD are then given. The volume continues with a detailed look at nitric oxide and inducible nitric oxide synthase in retinal vascular disease, an explanation of an in vivo technique of studying the effect of lipid hydroperoxides on circulating leucocytes in the retina, an excellent review of oxidative stress in retinopathy of prematurity, and a look at VEGF induced oxidative stress in the retinal ganglion cell. The book ends with a detail examination of the role of carotenoids in retinal health and disease. These 31 chapters summarize what is known about oxidative stress in retinal and choroidal disorders. All those involved with degenerative diseases of the eye will find Studies on Retinal and Choroidal Disorders to be illuminating and comprehensive.

This text is designed to be an inclusive resource that addresses the educational needs of all cleft care providers, from novice learners looking to develop their area's first multidisciplinary cleft team to seasoned specialists looking to improve their outcomes. This book has a team-based framework with chapters that address pertinent topics in cleft care by national and international authorities on the subject from plastic surgery, facial plastic surgery, pediatric otolaryngology, oral maxillofacial surgery, speech-language pathology, dentistry, orthodontics, psychology, and more. This text also brings attention to special topics often ill addressed in traditional cleft care resources, including psychosocial issues, safety and preparedness in low-resource settings, and guidance for building a multidisciplinary cleft care team where needed. The book includes access to 60 high-quality surgical videos to support the techniques reviewed in the chapters.
