*Innovation in Information Technology* Sep 03 2020 Progress in information technology (IT) has been remarkable, but the best truly is yet to come: the power of IT as a human enabler is just beginning to be realized. Whether the nation builds on this momentum or plateaus prematurely depends on today's decisions about fundamental research in computer science (CS) and the related fields behind IT. The Computer Science and Telecommunications Board (CSTB) has often been asked to examine how innovation occurs in IT, what the most promising research directions are, and what impacts such innovation might have on society. Consistent themes emerge from CSTB studies, notwithstanding changes in information technology itself, in the IT-producing sector, and in the U.S. university system, a key player in IT research. In this synthesis report, based largely on the eight CSTB reports enumerated below, CSTB highlights these themes and updates some of the data that support them.

This volume shows how information technology is currently contributing to, and bringing about changes in the way history is taught and learned. The international selection of the contributions shows that these phenomena are not restricted to just one country. The impact of information technology on history curricula is explored in depth in one section of the book, whilst other sections focus on classroom activities and issues, on the development of software for history, and on the relevance of current information technology developments. But the question which lies at the heart of it all remains that of how information technology can enhance the teacher's ability to offer situations in which learners can form and develop a real understanding of the nature of historical processes, and the ways in which they can be studied.
